

Promenade is a linear significant public space

Proposed Promenade at Engineering Center Campus

#### Description:

A promenade is a pathway for learning. It is a public place for walking that directly connects one point to another. More than just a wide sidewalk or trail, a promenade is of significant importance with differing hardscape materials and more formal canopy plantings. Promenades may define one edge or bisect a larger space. The space is characterized by pedestrian-friendly features and a clearly defined architectural volume that can allow for congregation as well as settings for small group study areas. Promenades should have continuous areas shaded and protected from the rain by structures.

#### Elements:

**Hardscape:** Hardscape areas will incorporate modern urban furniture and lighting elements with clean lines and will be paved with unit pavers in dynamic patterns.

**Plant Materials:** Palm trees shall be the dominant canopy planting, used to reinforce the linearity of the space

**Site Furnishings:** Benches and trash receptacles shall be located along the edges of the promenade at regularly spaced intervals to provide a sense of repetition and various opportunities for resting and interaction.

**Lighting:** Appropriate, free standing light standards shall be located along the edges of the promenade at regularly spaced intervals to provide a sense of repetition that further the linearity of the space. Lights shall be spaced to provide for a consistent and continuous coverage at pedestrian scale while minimizing
