Part I - General Project Identification

Proposed Action:

Describe the proposed project (the preferred alternative) in detail. List and briefly describe your proposed action (which must relate to the project purpose and need). Attach drawings/plans for the proposed action.

Florida International University (FIU) plans to build CasaCuba, a ±57,876 gross-square-foot humanities center located at FIU's Modesto A. Maidique campus in Miami, FL. The proposed facility will be readily accessible to the university community and to visitors from the local community and beyond, such as students, faculty, scholars, and the general public. This project is being partially funded by a grant from the National Endowment for the Humanities (NEH) Challenge Grants Program (Grant No. CHA-264405-19).

In addition to the building, the project includes the construction of a courtyard, gardens, and associated exterior parking, sidewalks, landscaping, utilities and signage. The roadway and service drives will also be reconstructed as required. The proposed construction will take place on a +/- 2.36-acre site, located to the west of SW 107th Avenue between SW 16th Street and SW 17th Street. See Figure 1 for proposed project location.

This state-of-the-art center will host public lectures, academic conferences, digital exhibits, and research projects, engaging museums, historical societies, and other academic and cultural institutions through meaningful partnerships. CasaCuba will help preserve and showcase the wealth of Cuba-related intellectual and cultural resources at FIU, with a special emphasis on sharing and expanding its notable Cuba collections.

Purpose and Need:

Describe the problem that the project will address and the goals of the project. You may incorporate by reference information that is reasonably available to the public. Briefly describe the existing conditions on the project site, and the projected future conditions of the area impacted by the project. Identify any known sensitive environmental conditions.

FIU is a global leader in the study of Cuba and the preservation of Cuban culture. It is situated 228 miles from Havana, in Miami-Dade County, a geographic area that is home to 70 percent of the two million U.S. residents of Cuban origin. FIU enrolls over 56,000 students, including the largest number of students of Cuban origin outside of Cuba. Given FIU's location, its Cuban student population, its

research expertise in Cuba, and its prominent Cuban history, oral narrative, genealogy, photography and art collections across its colleges and museums, FIU is uniquely positioned to be the world's preeminent intellectual and cultural hub dedicated to fostering understanding of the Cuban heritage. CasaCuba will expand on FIU's depth and breadth of teaching, scholarship and cultural engagement on Cuba and the Cuban diaspora as it integrates and preserves the intellectual, cultural, historical, linguistic, and artistic riches of the Cuban people, and their impact on the United States.

FIU is renowned for its historical collections focused on Cuba and the experience of the Cuban diaspora. These assets, however, are widely distributed across various locations within the University, limiting their impact and visibility. CasaCuba will allow FIU to showcase its rich and extensive collection of artifacts, academic programs, student groups, and research projects devoted to Cuba, for the benefit of FIU students and faculty, and research scholars and visitors from around the world.

CasaCuba will seek to document, preserve, and share the history, experiences and legacy of the Cuban nation, and particularly the ways in which Cubans have influenced U.S. culture, and vice versa. Specifically, CasaCuba will collaborate with other local organizations to identify and preserve heritage materials that may be at risk of loss. It will work in close collaboration with the FIU Libraries on projects to enhance current digital collections and digitize new materials. CasaCuba will also collaborate with relevant FIU units and industry partners to apply the latest technologies to showcase Cuban culture in new, compelling ways, such as interactive oral history and genealogy platforms, and virtual reality. And it will host regular events aimed at diverse audiences to promote awareness of temporary and permanent holdings.

The project area currently consists of a former under-utilized parking lot and sodded open areas that will be repurposed into the proposed humanities center.

Alternatives Considered:

Describe any reasonable alternatives, including the No-Action (or do nothing) alternative.) You have discretion as to the number and breadth of alternatives. For example, the need to use existing infrastructure necessary to support a proposed action can be a basis for identifying a discrete number of alternatives. If there is consensus about the environmental aspects of the proposed action based on input from interested parties, you can consider the proposed action and proceed without consideration of additional alternatives.

Otherwise, you need to develop reasonable alternatives to meet project needs (42 U.S.C. § 4332(E)). When that alternative includes mitigation, include a brief discussion of those measures that avoid, minimize, reduce or eliminate, rectify or restore, or compensate for the impacts. If there are no other reasonable alternatives to the proposed action, please provide an explanation.

As there is limited undeveloped space on the FIU campus for new development to meet the needs of the proposed CasaCuba facility, a limited number of sites could be considered for the proposed project. As described in the letter from FIU President, Mark B. Rosenberg, included in Attachment A, "The site must accommodate an iconic, state-of-the-art building with capacity for a performing arts and events venue, classrooms to host interdisciplinary courses on Cuba currently offered at FIU, exhibition galleries, infrastructure for collections storage and maintenance, seminar rooms, and areas conducive to education, discussion, reflection and celebration, facilitating humanistic work on Cuban studies." The site must also provide visibility from the University's main entrance on SW 107th Avenue, with its own parking, immediate access to the surrounding community, and be in close proximity to the FIU Ronald W. Reagan Presidential House.

Only the Temporary Gravel Lot on SW 107th Avenue between SW 16th and 17th Streets meets the access, logistics, size, and visibility requirements. Other vacant properties at the University, such as

the former Phi Gamma Delta Fraternity House, were considered as alternative sites; however, the University leadership dismissed these sites due to lack of adequate space to meet the needs of the project.

The preferred CasaCuba site is a temporary gravel parking lot without any significant site improvements. This site provides frontage and visibility from a major campus entrance and highly trafficked SW 107th Avenue. Vehicular traffic from outside visitors to CasaCuba would be relatively direct and not increase congestion for normal campus circulation. The site also offers ample room for future phases of CasaCuba development.

Explain in detail the reason for not selecting the non-preferred alternative.

FIU's historical collections focused on Cuba are widely distributed across various locations throughout the University, which limits their accessibility. A No-Action Alternative would maintain this limitation and would limit the University's ability to accomplish the project's goals of documenting, preserving, and sharing the history, experiences, and legacy of Cuba with researchers and the general public.

Affected Environment:

Briefly describe the existing conditions on the project site. The description should summarize any site-specific conditions identified in Part II. Describe projected future conditions of the area impacted by the project. Identify any known sensitive environmental conditions. This information is required for all building renovations and new construction (including building additions, temporary facilities, and trailers). Include the total site acreage and existing land use in the vicinity of the project.

The area(s) which will be affected by the proposed action are identified in the attached map. This area consists of -- [add brief description of the environmental state of the area that will be affected by the location and operation of the project, focusing on those areas and resources that are potentially sensitive—the goal is to show the utility and need to identify actual place based environmental issues rather than compiling laundry lists of environmental resources that are not at issue by showing which environmental aspects the proposed activity may impact (aquifers, nesting areas, graves, sacred sites etc.)].

As shown in Figure 1, the proposed CasaCuba site is on the southeastern corner of FIU's Modesto A. Maidique Campus. The ±2.36 acre site is within Miami's urban core and the surrounding area is completely developed. The site fronts SW 107th Avenue, a main arterial roadway, between SW 16th and SW 17th Streets in Miami, Florida. The site is bounded by SW 107th Avenue to the east, SW 108th Avenue to the south, former fraternity housing to the west, and SW 16th Street to the north. The FIU campus was constructed on land that was formerly the Tamiami Airport; however, the proposed site remained undeveloped until approximately 2001 when the site was cleared and regraded. The site is currently partially paved with a gravel parking area and grassy area. No natural vegetation or habitat remain on site. Existing land use maps classify the site as an educational facility; the site is zoned as commercial. The surrounding area is developed urban land. Surrounding land uses include parks and zoos, fixed single family, multiple dwelling units, shopping centers, and institutional (see Figure 2 and Attachment B for photos of the existing site conditions).

Part II – Environmental Consequences

1.0 Air Quality

Consult the EPA Green Book or your State or local government's environmental or natural resources offices to determine if your project site falls within an EPA air quality non-attainment area, with air quality worse than the National Ambient Air Quality Standards as defined in the Clean Air Act Amendments of 1970 (P.L. 91-604, Sec. 109).

	Yes	No
Is the project in an air quality nonattainment or maintenance area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
If Yes, will the project:		
Exceed net total of threshold level for regulated air pollutants?	<input type="checkbox"/>	<input type="checkbox"/>
Increase cause major increase in the number vehicles to the site?	<input type="checkbox"/>	<input type="checkbox"/>
Emissions above applicable <i>de minimis</i> levels?	<input type="checkbox"/>	<input type="checkbox"/>
Does the project require an air quality analysis?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Does the project require an air quality analysis for construction impacts?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks: The project is not within an EPA air quality nonattainment or maintenance area. The proposed project is within the boundary of the university campus and is not anticipated to significantly increase the number of vehicles on site; therefore, it is not anticipated to have a negative effect on air quality or priority pollutant emissions.

Any air quality impact during construction will be temporary and will primarily be in the form of emissions from diesel-powered construction equipment and dust. Best Management Practices will be implemented in all phases of construction in order to satisfy permit requirements and to minimize construction impacts.

2.0 Water Quality

You may consult with your State or local government's environmental or natural resources offices for assistance in obtaining water quality information for your project.

Streams, Rivers, Watercourses & Jurisdictional Ditches

	Yes	No
Are there Streams, Rivers, Watercourses or Ditches in/near the project area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Does the proposed action have the potential to impact water quality (including groundwater, surface water, or public water supply)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Would there be an increase in stormwater?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Is there any Wild or Scenic River in/near the project area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Is there a Sole Source Aquifer in/near the project area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Other Waters

	Yes	No
Are there any lakes or ponds in/near the project area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Are there other surface/below surface waters in/near the project area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks: Federal agencies are required to comply with all federal, state, interstate, and local water pollution control requirements both substantively and procedurally. The Clean Water Act (CWA) provides statutory basis for the State water quality standards programs. Section 401 of the CWA includes Water Quality Certification requiring states to certify compliance of

federal permits or licenses through the State Water Quality Certification program to ensure that actions are consistent with the water quality regulations of the State of Florida. Section 402 of the CWA requires the US Environmental Protection Agency (USEPA) to implement the National Pollutant Discharge Elimination System (NPDES). The USEPA regulates these programs in accordance with Title 40, Chapter I, part 131, Code of Federal Regulations (40 CFR 131). The USEPA has delegated the NPDES program to the Florida Department of Environmental Protection (FDEP).

The Safe Drinking Water Act (Public Law 93-523, as amended) requires protection of sole-source aquifers. The project is underlain by the sole source Biscayne Aquifer which is located in a thin layer of surficial sand of recent age and numerous plio-pleistocene age carbonate units. The regional groundwater flow is to the southeast toward Biscayne Bay; however, actual local groundwater flow may be influenced by the proximity of the C-4 Canal to the north.

Although the proposed project would increase the existing amount of impervious area, the existing runoff points of discharge are not anticipated to change nor is a significant increase in the pollutant loading of the runoff anticipated. The proposed project will include, at a minimum, any necessary on-site water quality treatment and best management practices as required by the South Florida Water Management District (SFWMD) (Chap. 62-330 FAC and the Applicant's Handbook Volume I and Volume II), including compensation for any reduction of existing on-site stormwater detention areas. The Project will be designed to meet the water quality standards in order to secure the necessary permits from SFWMD and Miami-Dade County Department of Regulatory and Economic Resources (RER). Under Florida regulations the issuance of the Environmental Resource Permit (ERP) through the SFWMD constitutes granting of the water quality certification by the State of Florida. No impacts to water quality are anticipated.

3.0 New/Unproven Technology

Will action involve the use or purchase of new equipment/technology (such as new restoration techniques)?

Are the environmental impacts known?

Yes	No
<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks: No new or unproven technology would be used in the development of the CasaCuba project. No environmental impacts from new/unproven technology are anticipated.

4.0 Cultural Resources

Results of Section 106 Research

SHPO – 4/20/20
SHPO – 4/20/20

Describe all efforts to document cultural resources using the categories outlined in the remarks box. Include any additional Section 106 work required, such as mitigation or deep trenching.

Remarks:

Area of Potential Effect (APE): According to 36 CFR 800.16(d), the APE is the geographic area or areas within which an undertaking may directly or indirectly cause changes in the character or use of historic properties, if such properties exist. The APE is influenced by the scale and nature of the undertaking as well as its geographical setting. The APE must include measures to identify and evaluate both archaeological and historical resources. Normally, archaeological and other below-ground resources will be affected by ground disturbing activities and changes in ownership status. Structural resources and other above ground sites; however, are often impacted by those activities as well as alterations to setting, access and appearance. As a consequence, the survey methodologies for these two broad categories of sites differ.

The project APE, as described in the Cultural Resources Assessment Survey (CRAS) prepared for the CasaCuba project (Attachment C) considers the improvements that will be implemented as part of the proposed project and the extent of potential ground disturbance, as well as the setting and character of the project area. The project area is approximately 2.36 acres of undeveloped land on the eastern side of the FIU campus. The archaeological APE included this 2.36 acres. The historic resources APE consisted of the project area and extended to a distance of 150 feet to allow for the consideration of potential visual or noise impacts. Figure 2 of the CRAS, included in Attachment C, illustrates the APEs.

Coordination with Consulting Parties: As documented in the CRAS, Mr. Jeff Ransom, Miami-Dade County Archaeologist was contacted on January 10, 2020 and Ms. Sarah Cody, Historic Preservation Chief for Miami-Dade County, was contacted on January 14, 2020 for comment on the proposed project. Mr. Ransom responded on January 13, 2020 that his office did not have any cultural resources concerns regarding the project. No response was received from Ms. Cody’s office. A copy of the CRAS was submitted to the Division of Historic Resources (DHR) in March 2020. DHR provided concurrence on April 20, 2020 and determined that the proposed project will likely have no effect on historic properties listed, or eligible for listing, on the NRHP, or otherwise of historical, architectural, or archaeological value (Attachment D).

Archaeology: No archaeological resources were identified within the project area.

Historic Properties: No historic resources were identified within the project area.

Documentation, Findings: Please see the attached CRAS dated January 2020 for a detailed description of the resources within the project vicinity (Attachment C). The survey area is heavily disturbed, and no cultural resources within the 2.36-acre APE were encountered during the investigation. Background research and a pedestrian survey confirmed the low archaeological potential of the project area. No subsurface testing was feasible during the survey due to the presence of hardscape, landscaping, gravel, spoil piles, and underground utilities.

Public Involvement: On June 8, 2020, FIU provided public notice that the proposed project would have no effect on historic properties listed, or eligible for listing, on the NRHP, or of historical, architectural, or archaeological value on the CasaCuba website (<https://casacuba.fiu.edu/news/index.html>). No comments were received by the June 22, 2020 deadline. A copy of the advertised public notice is included in Attachment C.

5.0 Ecological Resources

Biotic Resources

Describe the various types of flora (plants), fauna (fish, birds, reptiles, mammals, etc), and habitat located in the project area. Indicate if the project will have any impact on these species or their habitat.

Remarks:

The project site is within a highly urbanized area of Miami-Dade County with limited natural vegetation; therefore, the proposed project is anticipated to have a minimal effect on wildlife and habitat. A site visit was conducted on December 23, 2019 by two environmental scientists from TY Lin International. Site conditions indicated a previously cleared and graded parcel partially paved with an access road and turnaround area and a gravel parking area with light poles. Stockpiled material derived from tree planting activities throughout campus was observed along the southern and eastern boundaries of the project site. The mounds consisted of soil and minor debris with weedy groundcover species growing on top. Vegetation throughout the property consisted mainly of sod and weedy groundcover species, along with landscape cocoplum (*Chrysobalanus icaco*) and Areca palm (*Dypsis lutescens*) hedges along the border of the property. No wildlife species, or evidence of nests or burrows were observed during the site visit. See Attachment B for photos of the existing site conditions.

Threatened or Endangered Species

Are there listed species and/or designated critical habitat present in areas affected directly or indirectly by the project? Please review the [FWS Critical Habitat resources](#).

Is the project within the known range of any federal species?
Does the project area contain any critical habitat?
Is Section 7 formal consultation required for this action?
Are there any State threatened or endangered species in the area?
Consultation with USFWS (Attach letter)
Consultation with State Agency (Attach letter)

Yes	No
X	
	X
	X
X	
	X
	X

Remarks:

A review of online resources and databases of the Florida Fish and Wildlife Conservation Commission (FFWCC), Florida Natural Areas Inventory (FNAI), and the U.S. Fish and Wildlife Service (USFWS) was conducted for the proposed project site. USFWS's Information for Planning and Consultation (IPaC) database and the FNAI Biodiversity Matrix were used to generate reports of potential threatened and endangered species which are known or expected to be in or near the project area. The IPaC resource list is included as Attachment F and the FNAI Biodiversity Matrix query results are included in Attachment G. A site visit was conducted in December 2019 to evaluate the potential presence of each of these species. Due to the developed nature of the site and its lack of potential habitat for listed species, the project is not anticipated to have an impact on Federal and State listed threatened or endangered species. There were no threatened or endangered species observed during the site visit.

The project lies within a Core Foraging Area (CFA) of an active wood stork (*Mycteria Americana*) colony, a federally threatened species, that is approximately 8.4 miles away. The wood stork's CFA is a 30-kilometer (18.6-mile) zone surrounding the colony. The USFWS's programmatic Wood Stork Effect Determination Key was consulted and a determination of "no effect" was achieved for the proposed project based on lack of suitable foraging habitat. Furthermore, there is no evidence of breeding or foraging occurring within the project area. Projects that key to a "no effect" determination do not require additional consultation or coordination with the USFWS. Wood Stork Technical Special Provisions should be incorporated into the contractor's bid documents for use during project construction.

The Everglades snail kite (*Rostrhamus sociabilis plumbeus*) is listed as endangered by the USFWS. The snail kite inhabits large open freshwater marshes and lakes with shallow water, less than four feet deep, and a low density of emergent vegetation. It is dependent upon apple snails (*Pomacea paludosa*) which are caught on the water surface. Nests usually are located over water in a low tree or shrub (commonly willow, wax myrtle, pond apple, or buttonbush, but also in non-woody vegetation like cattail or sawgrass). The project lies within the USFWS Consultation area for the Everglades snail kite; however, suitable nesting and foraging habitat does not exist within the project area. Therefore, due to the lack of suitable habitat, the proposed project is anticipated to have "No Effect" on the Everglades snail kite.

The USFWS recently listed the Florida bonneted bat as endangered under the Endangered Species Act (ESA). The project lies within the USFWS's Florida Bonneted Bat (*Eumops floridanus*) Consultation Area, as well as the South Florida Urban Bat Area, in which applicants are suggested to contact USFWS for guidance in addressing bonneted bat impacts and individual consultation. The Florida bonneted bat uses forests, wetlands, and other natural habitats. It forages high in the air over natural as well as human-altered landscapes and exists in residential and urban areas. The bats roost in palms, hollow trees, and in buildings; however, presently there are no known active, natural roost sites. All active, known roosts are bat houses. Florida bonneted bats appear able to use a wide array of habitat types; however, precise foraging and roosting habits and requirements are relatively unknown. No known roost sites are located within the project vicinity and this project will not displace potential suitable roost sites. If roost sites are located, actions will be taken to avoid

or minimize losses. Therefore, the proposed project is “Not Likely to Adversely Affect” the Florida bonneted bat or its preferred habitat.

The American crocodile (*Crocodylus acutus*) is listed as threatened by the USFWS. The American crocodile is usually associated with mangroves and inhabits coastal estuarine marshes, tidal swamps, and creeks along edges of mainland and islands. Although the project lies within the USFWS Consultation area for the crocodile, its preferred habitat is not present within the project area. Therefore, due to the lack of suitable habitat, the proposed project is anticipated to have “No Effect” on the American crocodile or its preferred habitat.

The eastern indigo snake (*Drymarchon corais couperi*) is listed as threatened by the USFWS. Indigo snakes are found in a wide variety of habitats including mangrove swamps, wetland prairies, xeric pinelands, and scrub. Though generalists in habitat type, suitable habitat must also contain some sort of burrow or underground shelter that the snake uses during winter months. No eastern indigo snakes have been documented in the project area and there is no habitat capable of supporting indigo snakes within the study area. Therefore, it is unlikely that indigo snakes are present within the project area. Although the presence of the Indigo snake is unlikely, project construction could potentially impact this species during heavy equipment usage should the snake occur within the existing right of way. Therefore, to avoid conflicts between this snake and construction, the USFWS Standard Protection Measures for the Eastern Indigo Snake, will be incorporated into the construction plans and specifications and the proposed project is “Not Likely to Adversely Affect” the indigo snake or its preferred habitat.

None of the plant species observed within the project corridor are designated Endangered or Threatened by the USFWS and no federally protected plants occur within the habitats identified in the project area.

6.0 Wetlands

Are there [wetlands](#) in/near the project area?

Yes	No
<input type="checkbox"/>	<input checked="" type="checkbox"/>

Total wetland area: 0 acre(s) Total wetland area impacted: 0 acres(s)

Wetland No.	Classification	Total Size (Acre)	Impacted Acres	Jurisdictional	Non-Jurisdictional	Comments

<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input type="checkbox"/>

Individual Wetland Finding

Alternatives that will not result in any wetland impacts are not practicable because such avoidance would result in (Mark all that apply and explain):

Substantial adverse impacts to adjacent homes, business or other improved properties;

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>

Substantially increased project costs;
 Unique engineering, maintenance, or safety problems;
 Substantial adverse social, economic, or environmental impacts, or
 The project not meeting the identified needs

If yes, and there is no State, local or USACE evidence that the location is not within a wetland, discuss measures to avoid, minimize, and mitigate wetland impacts. Make sure to include mitigation ratios.

Remarks: A desktop review conducted on the U.S. Fish & Wildlife Service’s National Wetlands Inventory (NWI) and a site visit conducted on December 23, 2019 revealed that there are no wetlands within the project area. Figure 3 illustrates the location of surface waters within the project vicinity according to the NWI.

7.0 Floodplains

Is the project located in a [FEMA designated floodplain](#)?

Yes	No
X	

Follow the instructions in the link above to look up your project site and generate a FIRMette. Attach other documentation in the appendix. For projects within the 100-year floodplain, NEH will integrate the E.O. 11988 8-step process as part of this EA.

Remarks Executive Order (EO) 11988, Floodplain Management, directs federal agencies to take action to reduce the risk of flood loss; minimize the impacts of floods on human safety, health, and welfare, and restore and preserve the natural and beneficial values, served by floodplains. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps, the proposed project lies within areas of the 100-year floodplain (Flood Zone AH) (Figure 4); however, improvements will be made on property already developed above the 100-year floodplain. Therefore, although these improvements could involve work within the horizontal limits of the 100-year floodplain, no work would be performed below the 100-year flood elevation and, as a result, the proposed project would not encroach upon the base floodplain and complies with EO 11988. Similarly, any modifications to drainage structures included in the proposed project would result in an insignificant change in their capacity to carry floodwater. These changes would cause minimal increases in flood heights and flood limits. These minimal increases would not result in any significant adverse impacts or any significant change in flood risks or damage. If work is found to be necessary below the 100-year flood elevation, mitigation of any flood management impacts will be required and undertaken as part of the necessary Environmental Resource Permitting (ERP) process, resulting in no significant impact to regulated floodplains. There is no involvement with regulatory floodways and no impacts to the floodplain are anticipated.

A memorandum was prepared to document 8-Step process for compliance with Executive Order 11988: Floodplain Management. Please see the memo included in Attachment H for a description of the steps taken to address the development within the 100-year floodplain. A copy of the draft EA and EO 11988 public notice is also included in Attachment H and is published along with this draft EA for public review and comment.

8.0 Coastal Areas

Review the National Oceanic and Atmospheric Administration (NOAA) [Coastal Zone Management Act maps](#) to determine if the project falls within a State's or Territory coastal zone. If the site is within the coastal zone, NEH will assist you with preparing a Negative or Consistency Determination will be submitted to the State Coastal Management Program office. The State determination will be incorporated into the impacts section. The State has up to 75 days to review and respond. A FONSI cannot be finalized until the CZMA process is completed.

	Yes	No
Is the project located in a Coastal Barrier Resource System?		X
Is the project located in a Coastal Zone?	X	
Is the project consistent with the State's CZMP? (Attach coordination with State Agency to appendix)		

Remarks: The Coastal Zone Management Act (CZMA) was enacted in 1972 to encourage coastal states to develop comprehensive programs to manage and balance competing uses of and impacts to coastal resources. Florida's coastal zone comprises the entire State. The Florida Coastal Management Act of 1978 authorized the Florida Department of Environmental Regulation (now the FDEP) to develop a Comprehensive Florida Coastal Management Program (FCMP). Only coastal cities and counties that include or are contiguous to state water bodies are eligible to receive coastal management funds.

Coastal Consistency Review was conducted by NEH and a negative determination was submitted to the Florida State Clearinghouse for review on August 12, 2020. In a response from the State Clearinghouse on August 13, 2020, it was stated, "While it is covered by EO 12372, the Florida State Clearinghouse does not select the project for review. You may proceed with your project." The CZMA correspondences are included in Attachment I.

9.0 Energy and Natural Resources

	Yes	No
Will the project result in energy impacts during or after construction?		X
Will demand exceed supply?		X
Are scarce or unusual materials required for the proposed project?		X
Will the project change existing aircraft fuel consumption?		X
Are there parts of your project that are sustainable? (If yes, describe below)	X	

Remarks: In recognition of the University's commitment to sustainability practices and the inherent complexity of this building type, this project will be designed and built with the goal of meeting the USGBC's LEED "Silver" certification rating level at a minimum. The Project shall comply with Florida Statutes 255.251 Energy Conservation and Sustainable Buildings Act including 255.252 (3) and (4). The Project shall comply with Florida Statute 255.2575 Energy-efficient and sustainable buildings requirements that all state university buildings be constructed to comply with a sustainable building rating system or a national model green building code.

10.0 Noise

	Yes	No
Will the project change the current noise levels?		X
Will the project create temporary (less than 180 days) noise impacts?	X	
Are there any sensitive noise receptors near and/or adjacent to the project area?	X	

Remarks:

Surrounding areas of the project site exhibit high traffic volumes during peak travel times and special events. The project site is located along a busy road within an urban developed area. The Miami-Dade County fairgrounds are located south of the project site. The project is not anticipated to change current noise levels. During construction, noise levels may increase temporarily; however, construction best management practices will be implemented to limit these temporary noise impacts.

Two vacant University housing buildings are located immediately adjacent to the project site to the east. The residential use of these buildings was discontinued in 2018 and is anticipated to be office and/or educational in the future, which will complement the use of the proposed CasaCuba facility. Please see the attached memo from FIU regarding these two buildings in Attachment J.

11.0 Compatible Land Use

Will proposed action comply with local/regional development patterns for the area?
 Is the proposed action in or adjacent a [Wildlife Refuge or Wilderness Area](#)?
 Will the project affect a Wildlife Refuge or Wilderness Area?

Yes	No
X	
	X
	X

Remarks:

The project is consistent with required elements of the campus master plan including Future Land Use and academic/support facilities described in the Capital Improvement element to accommodate future needs. See Figure 5 for an illustration of Future Land Use within the project vicinity.

12.0 Construction Impacts

Will construction of the proposed project:
 Increase ambient noise levels due to equipment operation
 Degrade local air quality due to dust, equipment exhaust, or burning debris
 Deteriorate water quality when erosion or pollutant runoff occur
 Disrupt off-site and local traffic patterns

Yes	No
X	
	X
	X
	X

Remarks:

Construction activities for the proposed improvements may have limited short-term air, noise, vibration, water quality, traffic flow, and visual impacts for those residents and travelers within the immediate vicinity of the project. Construction Best Management Practices will be implemented in all phases of construction in order to satisfy permit requirements and to minimize temporary construction impacts.

The air quality impact will be temporary and will primarily be in the form of emissions from diesel-powered construction equipment and dust. Noise and vibrations impacts will be from the heavy equipment movement and construction activities. Potential water quality impacts resulting from erosion and sedimentation during construction would be controlled in accordance with the Stormwater Pollution Prevention Plan as required by the FDEP via the NPDES Program such as using silt fences along the project perimeter and silt barriers at catchment structures to prevent foreign material from entering the stormwater drainage system. Any temporary impacts resulting from construction of the proposed project would

cease when construction was completed and would be minimized by best management practices such as dust suppression and noise abatement.

Maintenance of traffic and sequence of construction will be planned and scheduled so as to minimize traffic delays throughout the project and to minimize access impacts to adjacent businesses and residences.

13.0 Solid and Hazardous Waste

	Yes	No
Is there an Environmental Due Diligence Audit (EDDA) for the Environmental Site Assessment (ESA) Phase I Report?	X	
If Yes, is ESA Phase II required/completed		X
If Yes, is ESA Phase III required/completed		X
What is the date of any building on the site? _____		
Does the project require the use of land that may be contaminated?		X
Will the proposed project generate solid waste?	X	
If Yes, are local disposal facilities capable of handling the additional waste?	X	

Remarks:

An evaluation of the project area was conducted to determine potential contamination concerns within the proposed project limits from properties or operations located within 500 ft of the project. This evaluation consisted of a search of historical records, current federal, state and local agency regulatory records, an environmental database search conducted by Environmental Data Resources (EDR), and a field verification of potentially contaminated sites within the project vicinity. The regulatory agency database report provided by Environmental Data Resources Inc. (EDR) reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the Study Area is included as Attachment K. This investigation identified six potentially contaminated sites within or near the project corridor (see Figure 6).

Site: FIU Campus- 11200 SW 8th Street

Distance: Within ½-mile from the project site

Description: Release of approximately 50 gallons of diesel from an above ground storage tank supplying an emergency generator.

Status: The site has since undergone cleanup, and a “No Further Action – Complete” designation was assigned to the site on 3/23/2011.

Site: 7-Eleven Store #37579 at 10698 SW 24th Street

Distance: Approximately ½-mile SE of the project site

Description: Discharges associated with the fueling system were reported in 1987 (“Site Rehabilitation Completion Report (SRCR) Complete” in 1994), 1992 (“SRCR Complete” in 1995), and most recently in 2006.

Status: The 2006 discharge was designated with “No Further Action with Conditions” on 6/18/2014. Conditions of the completion order are detailed in the Declaration of Restrictive Covenant and Subordination of Mortgage, dated March 4, 2014. Coordination with environmental agencies is currently ongoing.

Site: Sunshine #236 at 10690 SW 8th Street, Miami, FL

Distance: Approximately ½ miles NE of the project site

Description: Discharges were reported in 2008 (“NFA Complete” in 2016), 1998 (“NFA Complete” in 2016), 1995 (“Cleanup Not Required” in 2001), 1988 (“NFA Complete” in 2016), and 1987 (“SRCR Complete in 1993”).

Status: Site remediation has occurred at the property, including source removal activities, equipment upgrades, soil assessments, and groundwater monitoring. A site rehabilitation completion order has been issued for this site.

Site: Sunshine #225 at 1569 SW 107th Avenue, Miami, FL

Distance: Approximately 300 ft NE of the project site

Description: Discharges were reported in 1993 (“SA Ongoing” in 1994) and 1994 (“Cleanup Not Required” in 2001). Groundwater impacts have historically been detected at this property, with elevated levels of methyl-tert-butyl (MTBE) and benzene, toluene, ethylbenzene and xylenes (BTEX) detected above Groundwater Cleanup Target Levels. Site assessments and groundwater monitoring have subsequently occurred at the site.

Status: The most recent assessment report submitted on January 16, 2020 noted that no petroleum-impacted groundwater was detected above target levels at the property.

Two dry-cleaning facilities listed on FDEP’s Dry-cleaning Solvent Cleanup Program Priority Ranking List (January 2020) are located within ½ mile of the project site. Professional Experts at 10552 SW 8th Street, Miami, FL is located approximately 0.4 miles NE from the project site. It is ranked 436 of 884 on FDEP’s Priority Ranking List. Euro Dry Cleaners at 1559 SW 107th Avenue, Miami, FL is located approximately 700 feet east of the project site. It is ranked 591 of 884 on FDEP’s Priority Ranking List. Both of these facilities are no longer in operation but are eligible for state-administered cleanup under the Dry-cleaning Solvent Cleanup Program. This program aims to clean up properties contaminated as a result of operations of dry-cleaning facilities. No evidence of cleanup activities was found on online regulatory databases, although monitoring wells were observed to the east of the former Euro Dry Cleaners location during the site visit.

Historical aerial photographs dating back to 1938 were also reviewed using the EDR Aerial Photo Decade Package which is provided in the EDR Report and Google Earth imagery. The 1938 aerial photograph shows that the area was undeveloped and in a natural condition. The project area and surrounding area is undeveloped, with the exception of the Tamiami Trail (US 41) to the east. The Tamiami Airport was established sometime between the years 1944 and 1947, and is shown on the 1950 aerial. This airport was located on the property that would eventually become the FIU campus. No evidence of contamination due to airport activities was found in regulatory databases. In 1967, the Tamiami Airport was decommissioned, and non-airport related development was beginning to grow in the previous airport boundaries. FIU began to be created on the site of the former Tamiami Airport in 1969. The 1978 aerial shows the development of FIU’s campus, with some remnants of the runways remaining. The project area remains largely undeveloped during this time. Subsequent years show the continued development of FIU’s campus and surrounding area. Within the project area, the access road with turnaround area was constructed between 1999 and 2002. The addition of the gravel parking area occurred between 2011 and 2013.

Based on location and current status of the identified contaminated sites and review of historic aerials, as well as regional groundwater flow, contamination poses a low risk to impact the site.

The site visit conducted in December 2019 revealed the presence of stockpiled material along the southern and eastern boundaries of the project site. This material appeared to be made up of soil, vegetation, and minor debris. Groundcover species were growing on top of the mounds of material, indicating that the piles had been onsite for some time. According to FIU, this material is excavated soil from the installation of 2,100 palm trees throughout FIU's campus in July and August of 2019. The material was stockpiled at the site for use in future construction projects prior to the construction of the CasaCuba project. These soils are not suspected to be contaminated. Please see the Memorandum for Record included as Attachment L.

The final design for the project will be reviewed to enable the identification of contaminated properties in areas where soil excavation and dewatering may occur for the installation of structures and utilities. Construction impacts will be minimized by the avoidance of areas of known and/or suspected contamination whenever possible during the design of the drainage, lighting and structures. In addition, Special Provisions for Unidentified Areas of Contamination will be provided in the project's construction contract documents to address any potential contamination not previously identified.

Solid waste generated by the proposed facility is anticipated to be general waste similar to existing building facilities on campus and can be handled under the University's current waste disposal contract.

14.0 Socioeconomic Impacts

Will the proposed action result in the relocation people, businesses or farms?	Yes	No
	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Number of relocations: Residences: _____ Businesses: _____ Farms: _____ Other: _____		
Will the proposed action result in:	Yes	No
A change in business or economic activity in the project area	<input checked="" type="checkbox"/>	<input type="checkbox"/>
An impact on local public service demands	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Induced/Secondary impacts	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks: CasaCuba aims to enhance the business and economic activity in the area. CasaCuba seeks to leverage the business incubation and innovation expertise of StartupFIU to launch a co-working, communal space, including flexible offices and laboratory spaces layered with programming, advising, and community-building initiatives. CasaCuba is envisioned as a collaborative, inclusive, and value-adding center with a strong focus on helping the community reach economic development and connecting them with resources that help advance their individual and organizational goals.

15.0 Environmental Justice (EJ)

Are any low income or minority populations located within the project area?	Yes	No
	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Will the project result in adversely high or disproportionate human health or environmental impacts to the low income or minority populations population?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks: FIU is within Census Block Group 89.04, which consists predominately of the FIU campus and Tamiami Park to the south. This census block group shows a larger percentage of minority populations than surrounding block groups. According to the U.S. Census Bureau 2013-2017 American Community Survey 5-Year Estimates, Census Block Group has a 46.5%

minority population. This percentage is higher than the U.S., Florida, and Miami-Dade County percentages, which are 27%, 24.3%, and 24.4% respectively. See Figure 7 for an illustration of census block group minority populations within the project vicinity. No data is currently available for low-income populations within the Census Block Group 89.04.

This project has been developed in accordance with the Civil Rights Act of 1964, as amended. This project will not impact community services, features, or neighborhoods and no minority populations will be negatively affected. The proposed project is anticipated to benefit minority populations through the documentation, preservation, and sharing of the history, experiences, and legacy of Cuba.

16.0 Farmland

Is this a new construction or expansion project that will convert undisturbed ground in an area that with potential prime farmland soils? If your new construction or expansion project site is identified as non-urban land, regardless of whether it is zoned for development, NEH will assist you with consulting the Natural Resource Conservation Services (NRCS) field offices for further designation in accordance with the Farmland Protection Policy Act. If your project site is identified as an urban area on a Census Bureau, USDA Important Farmland, or USGS Topographic map, no further review under this section is required.

Is this a new construction or expansion project that will convert undisturbed ground?
 Will the project affect any Agricultural Lands?
 Is there any Prime Farmland (per NRCS) in the project area?
 NRCS-AD-1006 Form score:

Yes	No
<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks:

17.0 Cumulative Impacts

When considered together with other past, present, and reasonably foreseeable future development projects on or off the airport, would the proposed project produce a cumulative effect on any of the environmental impact categories above?

Yes	No
<input type="checkbox"/>	<input checked="" type="checkbox"/>

Remarks:

Part III – Permits, Mitigation, Coordination and Public Involvement

PERMITS/MITIGATION

Permits

List all required permits, for the preparing the proposed project site and any zoning variances or changes. Indicate if any problems are anticipated in obtaining the permit

Remarks: South Florida Water Management District – Environmental Resources Permit (ERP)
Miami-Dade County Regulatory and Economic Resources – Class II Drainage Permit
Florida Department of Environmental Protection – NPDES Construction Generic Permit NOI

Mitigation

Describe all mitigation measures for the proposed project. Include any impacts that cannot be mitigated or those that cannot be mitigated below threshold levels. Also, provide a description of any resources that must be avoided during construction.

Remarks: N/A

EARLY COORDINATION

List each agency coordinated with, the date coordination was sent, and if a response was received in the following table. Make sure to include a copy of the response in the appendix. For Instance, State Historic Preservation Office for Section 106 consultation, USDA Extension office for the NRCS-AD-1006, etc.

Resource Agency	Date Letter Sent	Date Response Received	Date Draft EA Sent	Date Response Received
Florida Division of Historic Resources	March 5, 2020	April 20, 2020		
Florida State Clearinghouse	August 12, 2020	August 13, 2020		

Remarks: DHR provided concurrence that the proposed project will likely have no effect on historic properties listed, or eligible for listing, on the NRHP, or otherwise of historical, architectural, or archaeological value (Attachment D). State Clearinghouse indicated that the project was not selected for review and could proceed. (Attachment I)

PUBLIC INVOLVEMENT

Some level of public involvement is encouraged for every Federal Action. **The level of public involvement should be commensurate with the proposed action.** Discuss any public involvement activities (legal notices, letters to affected property owners and residents, meetings, special purpose meetings, local papers newspaper articles, etc.), including the number of notices and the dates that have been or will be posted for this project.

Remarks: FIU provided public notice on April 23, 2020 on the CasaCuba website (<https://casacuba.fiu.edu/news/index.html>) that a draft Environmental Assessment (EA) is being prepared (Attachment E). Public notice of the Section 106 determination by the Florida Division of Historic Resources was provided on June 8, 2020. Information on the proposed project, including the CRAS, is also available to the public via FIU's website at <https://facilities.fiu.edu/projects/BT-925.htm>. A public workshop will be scheduled if deemed necessary.

Public Controversy on Environmental Grounds

Is the project anticipated to involve substantial controversy concerning community and/or natural resource impacts?

Yes

No

Remarks:

The proposed project site is within the limits of the FIU Modesto A. Maidique campus and limited natural resources are within the project vicinity due to the developed nature of the area. CasaCuba has been part of FIU's vision since 2015 with the program book finalized on March 27, 2019. To date, no opposition to the project has been expressed.

DRAFT

Preparer Certification

I hereby certify that the information I have provided is complete and accurate, to the best of my knowledge:

*Colin P. Henderson, ENV SP
Vice President Environmental
T.Y. Lin International Group*

Date

Recipient Certification (must be signed by an authorized official; may not be delegated to consultant)

I hereby certify that the information provided is complete and accurate to the best of my knowledge. I also recognize and agree that construction activity, including but not limited to site preparation, demolition, or land disturbance, is limited by 40 CFR §1506.1 - Limitations on actions until the NEH issues a final environmental decision for the proposed project(s) and until compliance with all other applicable NEH approval actions (e.g., all conditions of the grant award have been met) have occurred. All applicable Federal, State, and local permits required shall be obtained before proceeding with the proposed action.

*Roberto M. Gutierrez, M.S. Assistant
Vice President for Research
Florida International University*

Date

NEH Decision

Having reviewed the above information, certified by the responsible official, the proposed projects warrant environmental processing as indicated below:

- The proposed action has been found to qualify for a Condensed Environmental Assessment. The Finding of No Significant Impact is attached.
- The proposed development action exhibits conditions that require the preparation of a detailed Environmental Assessment.
- The proposed development action requires preparation of an Environmental Impact Statement.

This Environmental Assessment becomes a Federal document when approved by the Responsible NEH Official.

*Ann E. Piesen, MCP
Federal Preservation and Environmental Officer
National Endowment for the Humanities*

FIU PRESIDENT LETTER FOR SITE SELECTION

DRAFT

September 25, 2020

National Endowment for the Humanities
400 7th Street, SW
Washington, DC 20506

To whom it may concern:

It is our pleasure to write this letter to explain the merits of the site selected for the construction of CasaCuba at Florida International University (FIU). From its inception, the vision for CasaCuba has been bold and ambitious. To build a leading think tank and cultural center for the study of Cuba and the preservation and celebration of the Cuban heritage has been a longtime aspiration of FIU, a Hispanic-Serving Institution that also enrolls the greatest number of U.S. university students of Cuban origin, in the community where the largest Cuban diaspora group is located.

In order to realize this vision, we understood early on that we would need to designate a special site for the CasaCuba facility on FIU's main campus. The site must accommodate an iconic, state-of-the-art building with capacity for a performing arts and events venue, classrooms to host interdisciplinary courses on Cuba currently offered at FIU, exhibition galleries, infrastructure for collections storage and maintenance, seminar rooms, and areas conducive to education, discussion, reflection and celebration, facilitating humanistic work on Cuban studies. Moreover, the site must function as a destination venue within FIU. It must provide visibility from the University's main entrance on 107th "FIU Avenue," and feature its own parking and immediate access to the surrounding community. Finally, given the prominence of the activities envisioned at CasaCuba and its vision as a gathering place for government leaders and other dignitaries, the site must be in close proximity to the FIU Ronald W. Reagan Presidential House.

On our campus master plan only the Temporary Gravel Lot on 107th Avenue Between SW 16th and 17 Streets site met the access, logistics, size, and visibility requirements. Even though other vacant properties at the University, such as the former Phi Gamma Delta Fraternity House, were considered as alternative sites, the University leadership dismissed these sites due to lack of adequate space to meet the needs of the project, and was unanimous in the suitability of the site that was ultimately chosen as the proposed home of CasaCuba.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark B. Rosenberg".

Mark B. Rosenberg
President, FIU

DocuSigned by:

A handwritten signature in black ink, appearing to read "María Carla Chicué".

CULTURAL RESOURCE ASSESSMENT SURVEY
(CRAS) REPORT AND PUBLIC NOTICE

DRAFT

PUBLIC NOTICE

Regarding the National Endowment for the Humanities' Section 106 Review of Florida International University's CasaCuba: A Leading Center to Foster Global Understanding and Collaboration on Cuban and Cuban American Affairs

The National Endowment for the Humanities (NEH) has awarded Florida International University a Challenge Infrastructure and Building Capacity Grant (CHA-264405) to establish CasaCuba: A Leading Center to Foster Global Understanding and Collaboration on Cuban and Cuban American Affairs. NEH is an independent grant-making agency of the United States government dedicated to supporting research, education, preservation, and public programs in the humanities. This public notice is issued as part of NEH's responsibilities under 36 C.F.R. Part 800, the regulations which implement Section 106 of the National Historic Preservation Act (NHPA) of 1966, as amended, 16 U.S.C. § 470. NEH, a funding agency, is required by regulation to identify and assess the effects of any proposed actions on historic properties. If any proposed action will have an adverse effect on historic resources, NEH works with the appropriate parties to seek ways to avoid, minimize, or mitigate any adverse effects. Additionally, the Section 106 regulations require NEH to consider the views of the public on preservation issues when making final decisions that affect historic properties.

In its grant application, Florida International University, proposes to use the grant for the design and to oversee construction of a premier humanities center approximately 50,000 square feet in size, to be located on the main campus at 16th St and 107th Avenue, Miami, Florida, 33165. The site is located on the east side of the Modesto A. Maidique Campus and may include the construction of a courtyard, gardens, and limited parking facilities. The roadway and service drives will also be reconstructed as required. The project area is approximately 2.36 acres in size and located to the west of SW 107th Avenue between SW 16th Street and SW 17th Street. The site has been previously disturbed and is currently vacant.

On April 20, 2020, the Florida State Historic Preservation Officer, Timothy A. Parsons, Ph.D. advised that the proposed undertaking would likely have no adverse effect. NEH has determined that the project will have "No Adverse Effect" pursuant to 36 CFR 800.5. If there are any significant changes in scope or unanticipated effects on the property subsequent to completion of the Section 106 review, the Florida International University shall stop work on the project and will immediately notify the NEH Federal Preservation Officer, in accordance with 36 CFR § 800.13(b). As required by Section 106, NEH is providing the public with information about this project, as well as an opportunity to comment on any knowledge of, or concerns with, historic properties in the proposed project area, and issues relating to the project's potential effects on historic properties. Comments may be submitted to the NEH by e-mail to FPO@neh.gov. The deadline for submitting comments is Monday, June 22, 2020,

**CULTURAL RESOURCES ASSESSMENT SURVEY FOR THE
FLORIDA INTERNATIONAL UNIVERSITY
CASACUBA PROJECT
MIAMI-DADE COUNTY, FLORIDA**

Prepared for:

Florida International University
11555 SW 17th St
MMC Campus, CSC 142C
Miami, FL 33199

Prepared by:

Janus Research
1107 N. Ward Street
Tampa, Florida 33607

FINAL REPORT

January 2020

EXECUTIVE SUMMARY

At the request of Florida International University (FIU), Janus Research conducted a Cultural Resources Assessment Survey (CRAS) of the FIU CasaCuba Project in Miami-Dade County. The purpose of this CRAS was to locate and evaluate archaeological and historic resources within the area of potential effect (APE) and to assess their eligibility for inclusion in the *National Register of Historic Places* (National Register) according to the criteria set forth in 36 CFR Section 60.4.

This assessment complies with Section 106 of the *National Historic Preservation Act (NHPA) of 1966* (Public Law 89-665, as amended), as implemented by 36 Code of Federal Regulations [CFR] 800 -- *Protection of Historic Properties* (incorporating amendments effective August 5, 2004); Section 102 of the *National Environmental Policy Act (NEPA) of 1969*, as amended (42 United States Code [USC] 4331 et seq.), as implemented by the regulations of the Council on Environmental Quality (CEQ) (40 CFR Parts 1500–1508); and the standards embodied in the Florida Division of Historical Resources' (FDHR) *Cultural Resource Management Standards and Operational Manual* (February 2003), and Chapter 1A-46 (*Archaeological and Historical Report Standards and Guidelines*), *Florida Administrative Code (F.A.C.)*. All work conforms to professional guidelines set forth in the *Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation* (48 Federal Register [FR] 44716, as amended and annotated).

Principal Investigators meet the *Secretary of the Interior's Professional Qualification Standards* (48 FR 44716) for archaeology, history, architecture, architectural history, or historic architecture. Archaeological investigations were conducted under the direction of James P. Pepe, M.A., RPA. Historic resource investigations were conducted under the direction of Ginny Jones, M.A.

No archaeological or historic resources were identified within the project area. Background research and a pedestrian survey confirmed the low archaeological potential of the project area. No subsurface testing was feasible during this survey due to the presence of hardscape, landscaping, gravel, spoil piles, and underground utilities.

INTRODUCTION

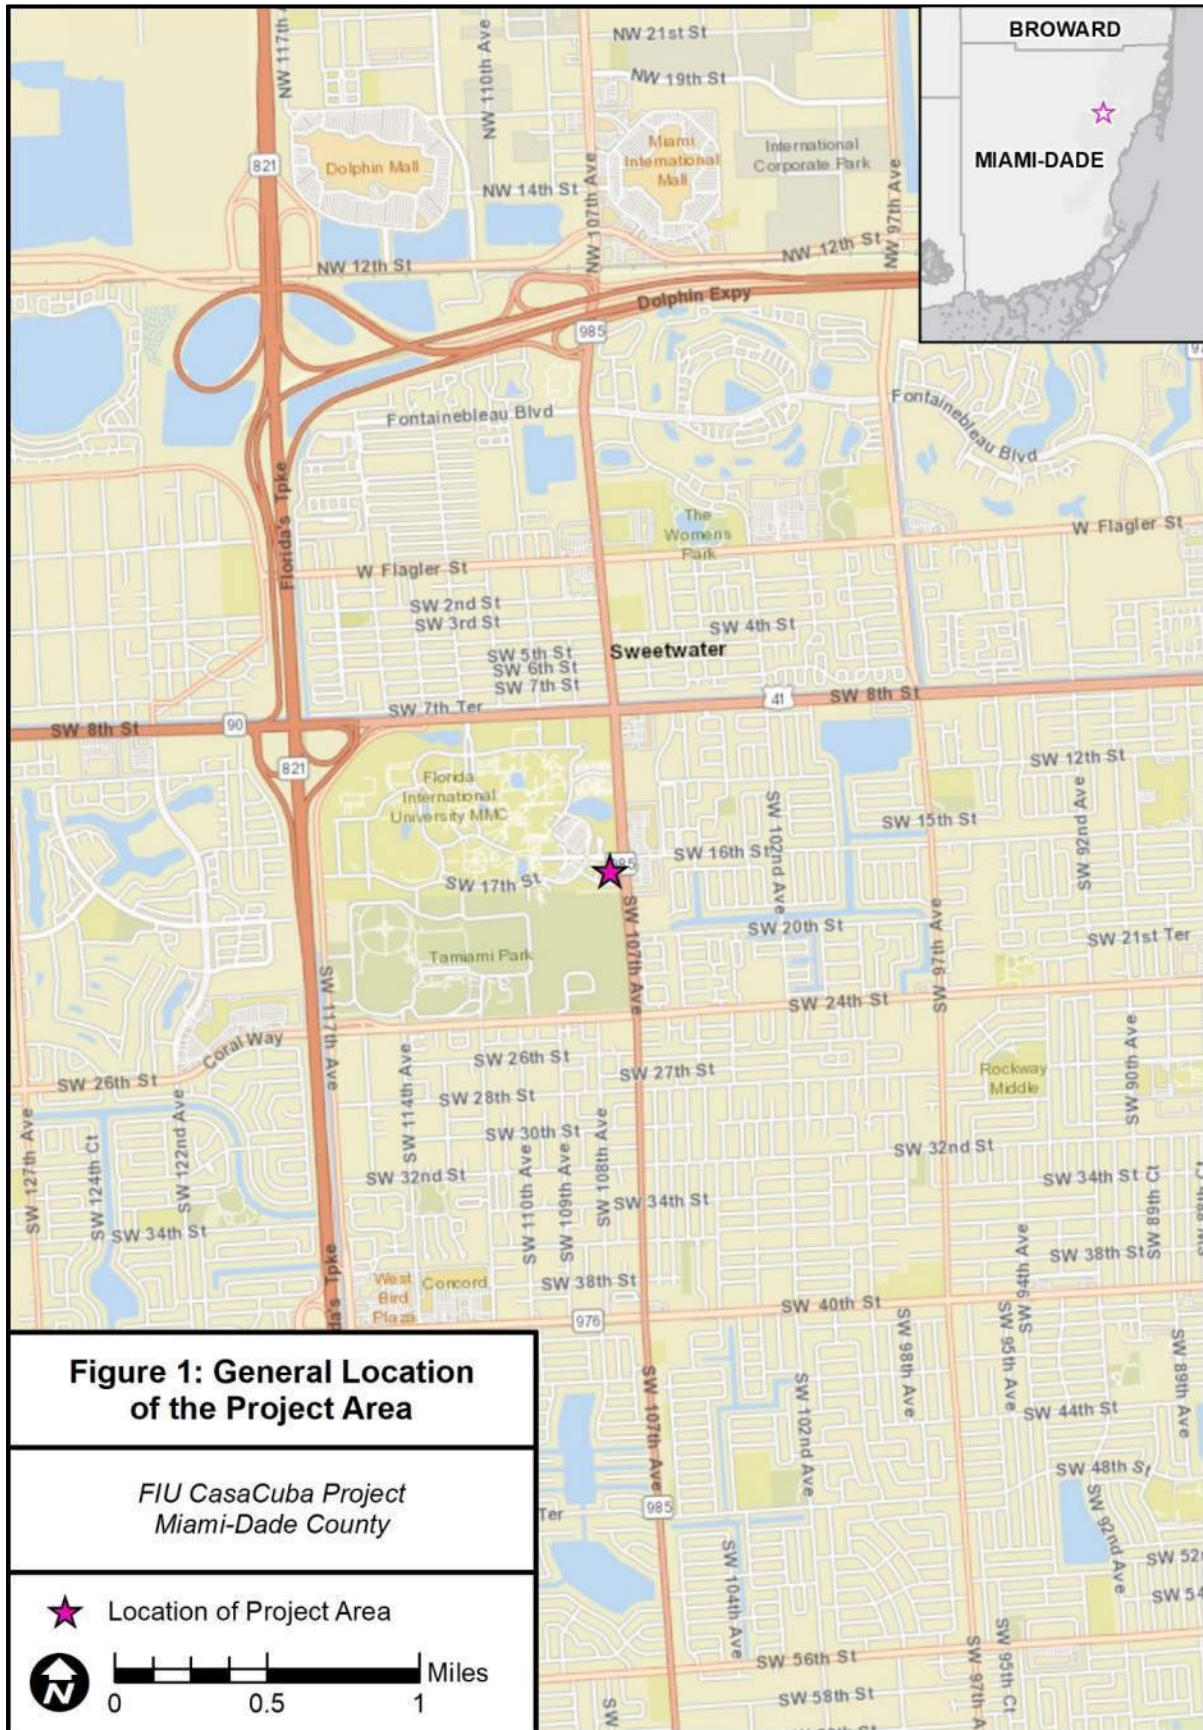

At the request of Florida International University (FIU), Janus Research conducted a Cultural Resources Assessment Survey (CRAS) of the FIU CasaCuba Project in Miami-Dade County (Figure 1). The purpose of this CRAS was to locate and evaluate archaeological and historic resources within the area of potential effect (APE) and to assess their eligibility for inclusion in the National Register according to the criteria set forth in 36 CFR Section 60.4.

This assessment complies with Section 106 of the *National Historic Preservation Act (NHPA) of 1966* (Public Law 89-665, as amended), as implemented by 36 Code of Federal Regulations [CFR] 800 -- *Protection of Historic Properties* (incorporating amendments effective August 5, 2004); Section 102 of the *National Environmental Policy Act (NEPA) of 1969*, as amended (42 United States Code [USC] 4331 et seq.), as implemented by the regulations of the Council on Environmental Quality (CEQ) (40 CFR Parts 1500–1508); and the standards embodied in the Florida Division of Historical Resources' (FDHR) *Cultural Resource Management Standards and Operational Manual* (February 2003), and Chapter 1A-46 (*Archaeological and Historical Report Standards and Guidelines*), *Florida Administrative Code (F.A.C.)*. All work conforms to professional guidelines set forth in the *Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation* (48 Federal Register [FR] 44716, as amended and annotated).

Principal Investigators meet the *Secretary of the Interior's Professional Qualification Standards* (48 FR 44716) for archaeology, history, architecture, architectural history, or historic architecture. Archaeological investigations were conducted under the direction of James Pepe, M.A. Historic resource investigations were conducted under the direction of Ginny Jones, M.A.

Project Description

The proposed project consists of the construction of a building on the east side of the Modesto A. Maidique Campus (Appendix A). This project is being funded by a grant from the National Endowment for the Humanities (NEH) Challenge Grants Program. The project includes the construction of a courtyard, gardens, and limited parking facilities. The roadway and service drives will also be reconstructed as required. The project area is approximately 2.36 acres in size and located to the west of SW 107th Avenue between SW 16th Street and SW 17th Street. It is in Section 7 of Township 54 South, Range 40 East on the Hialeah (1988) US Geological Survey (USGS) quadrangle map.

AREA OF POTENTIAL EFFECT

According to 36 CFR 800.16(d), the APE is the geographic area or areas within which an undertaking may directly or indirectly cause changes in the character or use of historic properties, if such properties exist. The APE is influenced by the scale and nature of the undertaking as well as its geographical setting. The APE must include measures to identify and evaluate both archaeological and historical resources. Normally, archaeological and other below-ground resources will be affected by ground disturbing activities and changes in ownership status. Structural resources and other above ground sites, however, are often impacted by those activities as well as alterations to setting, access and appearance. As a consequence, the survey methodologies for these two broad categories of sites differ.

The project APE, therefore, considers the improvements that will be implemented as part of the proposed project and the extent of potential ground disturbance as well as the setting and character of the project area. The project area is approximately 2.36 acres of undeveloped land on the eastern side of the FIU campus. The archaeological APE included this 2.36 acres (Figure 2). The historic resources APE consisted of the project area and extended to a distance of 150 feet to allow for the consideration of potential visual or noise impacts (Figure 2).

Project Area

Historic Resource APE

Note: The archaeological APE consisted of the 2.36-acre project area. The historic resources APE consisted of the project area and extended to a distance of 150 feet to allow for the consideration of potential visual or noise impacts.

ENVIRONMENTAL SETTING

Environmental and ecological factors through time have had a direct influence on the choice of occupation sites by precontact populations and early historic settlers. Therefore, factors such as geologic, hydrologic, and meteorological processes that may have affected the APE and its biotic resources are important elements in the formulation of a settlement/subsistence model for precontact and early historic peoples.

Paleo-Environment and Macro-Vegetational Change

Since the termination of the Pleistocene Epoch at the end of the Wisconsin glaciation, roughly 11,550 BC, Florida has undergone significant climatic and environmental change. Notable changes in climate and subsequently in flora and fauna required human groups to adapt to their surroundings. These adaptations resulted in cultural changes in their hunting/foraging strategies and seasonal migration patterns. Within the archaeological record, these changes can be observed by differences in settlement patterns, midden composition, refuse disposal patterns, and the kinds of stone tools or pottery made.

Paleobotanical evidence suggests that between 31,050 and 11,550 BC, Florida was dry, windy, and cool (Whitehead 1973). By the early Holocene, roughly 11,550 BC, the climate in west-central Florida had warmed and it is likely that precipitation increased; as a result, the shallow, perched lake levels rose. At about 3,050 BC, sea levels had risen to within a few meters of their current levels (Griffin 1988). Increased rainfall resulted in the formation of Lake Okeechobee, the Everglades, and other modern ecosystems (Watts and Stuiver 1980; Brooks 1984:38; Gleason et al. 1984:311). The relative sea level stability combined with freshwater discharge allowed for the development of coastal estuaries (Widmer 1988). Around 750 BC, the rising sea level had slowed to the point that some modern beach ridges in southern Florida, like Cape Sable, began to form. Increased precipitation in the interior made cypress common in many areas, including the Big Cypress Swamp, and made droughts in the Everglades less common (Griffin 1988). The southern rim of Lake Okeechobee reached its maximum height about this time (Brooks 1984:38). Vegetation reached its present distributional patterning and estuaries were fully formed and supplied by enough freshwater drainage to become highly productive (Widmer 1988; Griffin 1988).

The climatic fluctuations that have occurred over the past 13,000 years have affected the way human groups were able to exploit resources. The Paleoindian and Early Archaic inhabitants would have found the area drier and access to water restricted, possibly only seasonally available at perched water ponds, or in solution lakes (sinkholes). The Florida peninsula was wider as sea level was as much as 49 m (160 ft.) lower than present level (Milanich 1994:38). The continental shelf was exposed in what is now the Gulf of Mexico. Mixed forests of oak and pine probably dominated the lower, riparian areas and the higher, arid locations were covered with rosemary scrub and grass species.

By Late Archaic times, the environment of the region approached present conditions. With the incipient development of the Everglades, Lake Okeechobee, Lake Kissimmee, swamps, wetlands,

and other drainages, water was no longer the limiting factor to site and resource location. The choice of site location was probably more a matter of finding a reasonably dry spot rather than a nearby water supply (Almy 1976, 1978; Grange et al. 1979). Sea levels were still fluctuating but were within one meter of current levels (Mörner 1969; Widmer 1988). Woodland Period culture groups exploited microhabitats that existed until modern logging, ranching, and land drainage practices were instituted.

Regional Environment

The project area is in the Everglades physiographic region (White 1970:Plate 1-C), which is characterized by low, poorly drained flatland that represents the shallow, flat bottoms of Pleistocene seas. Peat and organic-rich soils that have accumulated on a bedrock floor which consists of Miami Oolite cover this region. Miami Oolite, a Pleistocene era deposit, consists of a soft, white to yellow limestone that varies from a sandy limestone to calcium carbonate. This bedrock floor rises to the east and west where it lies very near the surface and where elevations tend to be somewhat higher. The Miami Oolite gradually thickens to the east where it eventually forms the Atlantic Coastal Ridge. It is also important to note that modern human attempts to drain, ditch, or divert water have severely altered much of the Everglades. Elevations range from sea level along Florida Bay to approximately 10 feet above sea level (ASL) in the northern end of the Everglades. The project APE is relatively low with an elevation of approximately 7 feet ASL.

Limestone and dolostone dominate the sediments of Miami-Dade County. This formation is a soft, oolitic limestone that is generally less than 40 feet thick (Puri and Vernon 1964). It characteristically contains large quantities of ooliths, which are small, spherical particles formed when calcite or aragonite was deposited in concentric layers around a nucleus of some type (United States Department of Agriculture [USDA] 1996:3–4). Outcrops of silicified limestone, or chert, which was often sought out by precontact peoples as raw material sources for the manufacture of stone tools do not occur in this area (Lane et al. 1980). The closest known outcrops lie to the west along the Peace River in the central part of the state (Scott 1978; Upchurch et al. 1982). Shell was the material of choice for the manufacture of precontact tools, and large univalve and bivalve shells occur in abundance along nearby Biscayne Bay.

Water resources consist of ground and surface water. The surficial aquifer, known as the Biscayne Aquifer, consists of sediments from the Anastasia formation, Miami and Key Largo limestone, and the Fort Thompson formation (Scott 1992:53), and is recharged through local rainfall. Because of low hydraulic gradients, movement of water within this zone is very slow. Water is discharged from the aquifer through lateral seepage into streams or lakes, or through evapotranspiration. Drainage ditches have allowed for more rapid drainage of inland areas. The ground water aquifer in southern Florida, known as the Floridian Aquifer, underlies the surficial Biscayne Aquifer. The Floridian Aquifer is presently non-potable due to saltwater intrusion caused by excessive pumping.

Physical Environment of the Project Corridor

Modern drainage and development have drastically changed the drainage patterns and overall environment of the area during the past century. The modified nature of the project area makes it difficult to determine the original vegetative communities located in and around the survey area as no native vegetation remains. A review of the 1845 General Land Office (GLO) historic plat map (Florida Department of Environmental Protection [FDEP] 1845) shows the APE was in a part of the Everglades that was not surveyed during the mid-19th century. Surveyors' notes are not available for the APE.

Aerial photographs from 1938, 1952, 1961, 1968, 1971, 1973, 1978, 1984, and 1991 (FDOT, Surveying and Mapping Office 1996–2019; USGS 2019; University of Florida, George A. Smathers Libraries 1999–2016) were reviewed to identify hammocks in the APE and examine land use in the area during the 20th century. No hammocks or tree islands are visible in the APE on any photographs. In 1938, the APE appears flat and wet with no vegetation (Figure 3). No development is visible in the APE. Numerous ponds are scattered throughout the vicinity. The APE is still undeveloped during the 1950s and 1960s (Figure 4), though the runways of an airport are visible to the west. Drainage has started in the area as evidenced by canals and ditches to the south and east of the APE. By 1973, the APE is in a small undeveloped plot of land that has been encircled by a paved roadway. The land appears wet and covered by vegetation. An increase in development is evident to the west and northwest, including numerous buildings, paved parking lots, and retention ponds. The APE remains undeveloped on the 1984 and 1991 photographs. Modern satellite imagery available from Google Earth shows a paved road and large area of ground disturbance in the APE in 2002. A building has been constructed adjacent to the west of the APE at this time, followed by a second building in 2004.

Soils can also provide information about environmental conditions prior to development. A review of the 1947 *Soil Survey Detailed-Reconnaissance, Dade County, Florida* (USDA 1958) and *Soil Survey of Dade County Area, Florida* (USDA 1996) was conducted to look at pre-development soil drainage characteristics and environmental associations within the APE. The 1947 soil survey reconnaissance indicated that prior to development, the APE was mostly within poorly to very poorly drained Davie mucky fine sand. This soil was typically found on the edges of sandy prairies bordering the Everglades. Areas containing this soil type were described as having a thin layer of peat or moss followed by sand and underlain by limestone between 2 and 4 feet from the surface. Prior to drainage, natural vegetation consisted of sawgrass (USDA 1958:16–17). The southwest corner of the APE contained Rockdale fine sand, level phase–Limestone complex, which consisted of solution holes filled with fine sands to a depth of up to 2 feet. The drainage was generally good. Natural vegetation included slash pine, saw palmetto, and other subtropical plants. The review of the 1996 soil survey noted that most of the APE contains poorly drained Hallandale fine sand. This soil is found on broad flats between the Everglades and the coastal ridge. The water table is typically within one foot from the surface for up to 6 months and between one and two feet for the remainder of the year. Natural vegetation consists of slash pine with an understory of scattered saw palmetto and native grasses. Melaleuca and Australian pine are also present. The southern boundary of the

APE contains Urban land, which generally consists of parking lots, streets, sidewalks, buildings, and other structures where natural soil cannot be observed. Open areas of this soil type typically contain udorthents that have usually been altered by grading, shaping, and/or the addition of up to 18 inches of stony fill material (USDA 1996:21–22).

Currently, the APE does not contain any structures. The paved road is still present, along with sidewalks, a basketball court, an area of grass and gravel used as parking, and landscaping. Above-ground and buried utilities are present throughout the APE.

DRAFT

PRECONTACT OVERVIEW

Native peoples have inhabited Florida for at least 14,000 years. The earliest cultural stages are pan-Florida in extent, while later cultures exhibited unique cultural traits. The following discussion of the precontact time period in the vicinity of the APE is included in order to provide a framework within which the local archaeological record can be understood.

Paleoindian Period (12,000-7500 BC)

The earliest inhabitants of Florida are known archaeologically as Paleoindians. The prevailing view of the Paleoindian culture, a view based on the uniformity of the known tool assemblage and the small size of most of the known sites, is that of a nomadic hunting and gathering existence, in which now-extinct Pleistocene megafauna were exploited. Settlement patterns were restricted by availability of fresh water and access to high-quality stone from which the specialized Paleoindian tool assemblages were made. Waller and Dunbar (1977) and Dunbar and Waller (1983), from their studies of the distribution of known Paleoindian sites and artifact occurrences, have shown that most sites of this time period are found near karst sinkholes or spring caverns.

The majority of Paleoindian sites in Florida consist of surface finds. The most widely recognized Paleoindian tool in Florida is the Suwannee point, typically found along the springs and rivers of northern Florida. Other points, including Simpson and Clovis points, are found in lesser numbers. Other Paleoindian stone tools tend to be unifacial and plano-convex, with steeply flaked, worked edges (Purdy and Beach 1980:114–118 and Purdy 1981), bifacial and “hump-backed” unifacial scrapers, blade tools, and retouched flakes, including spokeshaves (Purdy 1981; Daniel and Wisenbaker 1987:62–81, 86–87). Some tools are little more than flakes or blades that were struck from cores, used, and discarded (Milanich 1994:51).

By the end of the Paleoindian period, the climate had become warmer and wetter. It is possible that at this time the modern wetlands of southern Florida began to emerge. Sea levels began a fairly rapid rise, shrinking the available land mass through coastal inundation. These dramatic climate changes, and possible pressure from Paleoindian hunters, led to the extinction of the Pleistocene megafauna and other species.

Archaic Period (7500-500 BC)

During the Archaic period, climate and sea levels gradually stabilized and southern Florida began to take on its current appearance. The Archaic period is known for the adaptations made by Florida’s earliest inhabitants to the modernizing climate and landscape. At the beginning of the Archaic, lifeways in Florida were quite similar to those of the preceding Paleoindian period. However, by the end of the Archaic, Florida’s native people had developed more sedentary lifestyles, made many technological innovations, the most important of which was the invention of pottery, and began to differentiate themselves into distinct regional subcultures. Florida’s Archaic is divided into an Early, Middle, and Late sub-periods, each of which have recognized horizons that are limited to restricted geographic areas and/or times.

Early Archaic (7500-5000 BC)

By the beginning of the Early Archaic sub-period, the Pleistocene megafauna and other characteristic fauna had become extinct. The settlement patterns and tools of Early Archaic people in Florida were initially very similar to those of the preceding Paleoindian period. As the Early Archaic progressed, more wetland habitats within southern Florida began to emerge.

By the end of the Early Archaic, local environments were becoming more subtropical. Additionally, interior ponds had begun to form (Carr 2002:194–195; Wheeler 2004:7). Sea levels throughout the Early Archaic were also still lower than modern levels.

Most of what is known about Early Archaic subsistence comes from highly preserved materials recovered from the anaerobic muck of the Windover Pond site in Brevard County. The Windover analysis (Andrews et al. 2002) indicates that Early Archaic peoples utilized the fibers of sabal palm, saw palmetto, and other plants in the weaving of baskets and textiles. Windover also illustrates that at least some Early Archaic populations had developed an intensive exploitation strategy focused on inland aquatic resources supplemented by terrestrial game (Dickel and Doran 2002:54). Within southern Florida, sites dating to this time period are rare. The Cutler Fossil site (8DA2001) in the Deering Estate, Miami-Dade County, is one definite Early Archaic site (Carr 1986). Other possible Early Archaic sites in southern Florida include Sunset Lakes (8BD3176), Blue Cow (8BD2150) (Davis and Carr 1993), and Silver Lakes (8BD1873) (Carr et al. 1991).

Middle Archaic Period (5000-3000 BC)

During the Middle Archaic period, the environment of southern Florida approached that of modern times, becoming less arid and supportive of a broader range of animal and plant resources. Broad wetlands, lakes and rivers began to develop and sea levels began to stabilize (Dixon 1999; Littman 2000). The human populations began to develop distinct regional adaptations to the changing environmental conditions. For the first time, such distinct regional adaptations and cultures appeared across all of Florida, including the southern portion of the peninsula. Along the southwest coast, populations developed year-round adaptations to the developing estuaries, producing large shell middens and constructing shell mounds in the process. Within southern Florida, Middle Archaic populations began to adapt to the developing Everglades ecosystem as well as the more dispersed wetland resources to the north of what is now Lake Okeechobee. The unique adaptation to the interior marshlands of southern Florida that can be seen developing during the Middle Archaic has been labeled the Glades or Everglades Archaic (Pepe 2000:32; Pepe and Jester 1995:19; Wheeler 2004; Wheeler et al. 2002:143-144).

Large coastal shell middens dating to the Middle Archaic are known for the southwestern coast of Florida, providing ample evidence of fully developed estuaries there during these times (Russo 1991; Torrence 1996). Within the interior, peat formation became widespread toward the end of this period, eventually giving rise to the Everglades ecosystem. The Middle Archaic artifact assemblage is not well documented but includes Florida Archaic Stemmed (FAS) and related points. Thonotosassa points, related to FAS points but larger, thicker, and more crudely made, have also been found in southern Florida at sites dating to the Middle Archaic (David Dickel, personal communication with James Pepe 2007; Farr 2006:91). Within southern Florida, an example of this point was noted at Ryder Pond (8LL1850). Wooden artifacts known from the

Middle Archaic include dugout canoes and a variety of wooden stakes and other tools recovered from wet sites. Although a variety of shell tool types are known from Middle Archaic sites, the main shell tool type known for southern Florida during this time is the *Strombus* celt (Wheeler 1994).

Several Middle Archaic sites have been identified on sandy ridges along the eastern edge of the Everglades. Sites such as Ranch Ridge (8BD1119) and Hiatus #2 (8BD3283) consist of scatters of lithic artifacts, including Middle Archaic point types and lithic debitage. Other probable Middle Archaic sites located in the Everglades, such as Bass Creek/Blockbuster #1 (8BD2878) and Cheetum (8DA1058), may represent early manifestations of the aforementioned Glades Archaic culture. All are, or were, hammock tree island sites surrounded by what would have been marshlands before modern drainage and other disturbances.

Late Archaic Period (3000-500 BC)

By the beginning of the Late Archaic, all of the modern physiographic regions and ecosystems of southern Florida were present in essentially their modern forms, including the entire Kissimmee-Lake Okeechobee-Everglades drainage system. Although the environment of southern Florida had achieved some sense of stability, the archaeological record of this period is much more dynamic. As a result, there is a great deal of variability between Late Archaic sites in southern Florida. Until recently, variations of Bullen's chronology for the Late Archaic Orange culture in northeastern Florida were generally used for the Late Archaic in southern Florida. Using this scheme, fiber-tempered pottery, the earliest pottery type known for all of North America, was considered to be a marker for the pottery of the Late Archaic. The generally accepted chronological sequence for the Late Archaic was expressly unilineal, with plain (undecorated) fiber-tempered pottery, followed by decorated fiber-tempered pottery, replaced finally by plain pottery that was not tempered with fibers (Bullen 1954, 1955, 1972). It was also understood that sand was eventually added as a tempering agent to fiber-tempered pottery. Orange pottery tempered with both fiber and sand is sometimes referred to as "semi-fiber tempered." The application of this chronology to southern Florida seemed to indicate that most of the area, especially the Everglades, was sparsely settled during the Late Archaic due to the general absence of Orange pottery at sites (Griffin 2002:146-149; Widmer 1988:201-201).

Investigations have questioned the use of the "standard" fiber-tempered sequence for the Late Archaic in southern Florida and suggest that, at some sites or in some areas, the earliest pottery present may be Sand-tempered Plain or thick, chalky wares. Investigations of a Late Archaic period site in Jupiter, the Joseph Reed Shell Ring, resulted in a tentative new chronology for the Late Archaic in southeastern Florida (Russo and Heide 2002). The proposed Late Archaic I is marked by fiber-tempered and/or semi-fiber tempered plain pottery. During the next proposed period, Late Archaic II, only chalky ware pottery, possibly early St. Johns Plain, is predicted to occur. The Late Archaic III, is distinguished by the presence of plain sand-tempered pottery along with the chalky pottery. Pepe and Jester (1995:19) propose that there are two, distinct Archaic traditions in southeastern Florida. In this model, the fiber-tempered pottery tradition is largely a coastal phenomenon associated with shell mound building, while the aceramic Archaic or "Glades Archaic" is a more widespread tradition, perhaps giving rise to the distinctive regional culture of

the Tequesta and their ancestors (see also Pepe 2000:29-32; Russo and Heide 2002:80; and Wheeler et al. 2002:143-144).

Many of the ubiquitous faunal bone middens located in the interior wetlands of southern Florida date to Late Archaic times, despite the fact that many of them lack pottery of any kind. These sites are notoriously difficult to date because, not only do they often lack chronologically diagnostic artifacts, but most of the faunal bone at the sites lacks collagen, the datable material in bone samples sent to radiocarbon labs. Nevertheless, many sites clearly have aceramic components that underlie pottery-bearing strata, logically indicating that these aceramic components most likely date at least as far back as the Late Archaic. Ongoing research by the National Park Service in the Big Cypress National Preserve and Everglades National Park has identified dense aceramic faunal bone middens yielding radiocarbon dates between 2850 and 1550 BC (Michael Russo, personal communication with James Pepe 2007; Schwadron 2006).

Formative Period (500 BC-AD 1513)

The Formative Period represents a time when changes in pottery and technology occurred throughout Florida. The specific changes in pottery traditionally used by archaeologists to mark the beginning of this period include the replacement of fiber-tempered pottery with sand-tempered, limestone-tempered, and chalky-paste ceramics. Three different projectile point styles (basally notched, corner-notched, and stemmed) also occur in some areas in contexts contemporaneous with these new ceramic types. This profusion of ceramic and tool traditions suggests population movement and social interaction between culture areas. The earliest known major occupations of southern Florida date to this period (Bullen et al. 1968; Sears 1982). The regional diversity that marked this period has been primarily attributed to local adaptation to varied ecological conditions within the state. The ceramic tradition for southern Florida, characterized by sand tempered bowls with incurvate rims, is known as the Glades or Everglades cultural tradition.

The project area is located in the Glades (Milanich 1994:301). As defined by Milanich (1994:298), the Glades cultural region (Figure 5) includes all of south Florida “east and south of the Caloosahatchee and Okeechobee regions. It includes most of St. Lucie County, “the Everglades, a largely sawgrass marsh in Hendry, Palm Beach, Broward, Dade, and Monroe counties; the Big Cypress Swamp west of the Everglades in Collier County; and extensive saltwater marshes and mangrove forests once found along both coasts, now almost totally destroyed in Broward and Dade counties.”

Glades Culture

Environmentally, the interior portions of the Everglades area are dominated by inundated or formerly inundated humic or peat soils which are drained by massive sheet-flow instead of river channeling. The Atlantic coast, which has developed from beach dune deposition, has a few rivers cutting through the Atlantic Coastal Ridge and a coast-parallel lagoon system.

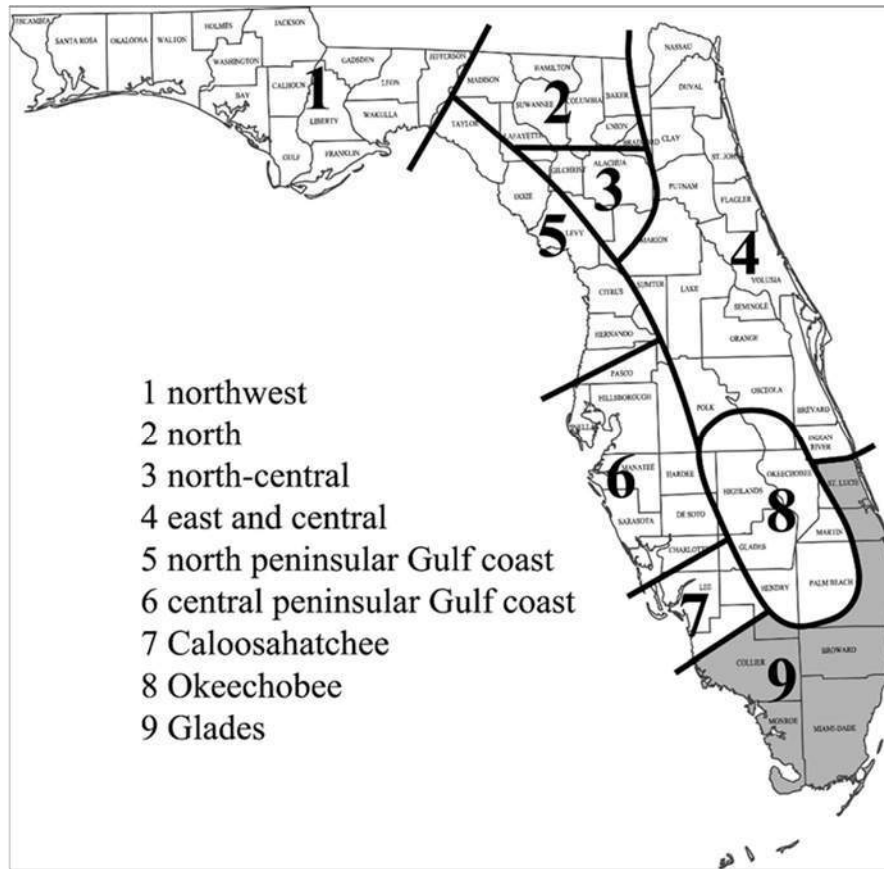

Figure 5 Glades Cultural Region.

John Goggin established a ceramic sequence for the Glades region on the basis of work he conducted from the 1930s to early 1950s (Goggin n.d.). Subsequent research has refined his basic chronological framework (Griffin 1988; Griffin et al. 1982). Table 1 is based on Griffin's 1988 work and presents the most thorough chronological framework for southern Florida. Summaries of the ceramic markers associated with each period are provided, as well. It is important to note that the information provided in this table is most applicable to the heartland of the Glades archaeological area: the Big Cypress Swamp, Everglades, and coastal portions of southern Florida to the south of Lake Okeechobee.

Glades period sites include those at Gordon's Pass (Goggin 1939), Goodland Point (Goggin 1950), Marco Island (Van Beck and Van Beck 1965), Useppa Island (Milanich et al. 1984), Horr's Island (McMichael 1982), Sanibel Island (Fradkin 1976), and the Turner River site (Sears 1956). An interesting feature of these large coastal sites is the progressive movement of habitation areas toward the water (Cushing 1896; Goggin 1950; Sears 1956), and indications are that dwellings may have been built to extend out over the water. Inland sites consist of shell and dirt middens along major watercourses (Laxson 1966) and small dirt middens containing animal bone and ceramic sherds in oak/palm hammocks or palm islands associated with freshwater marshes. The coastal Glades subsistence pattern is typified by the exploitation of fish and shellfish, wild plant food, and inland game, while Glades sites in the Big Cypress Swamp show a greater, if not exclusive, reliance on interior resources.

Table 1: Glades Cultural Sequence

Period	Dates	Distinguishing Characteristics
Glades I early	500 BC–AD 500	First appearance of sand-tempered pottery; no decoration
Glades I late	AD 500–750	First appearance of decorated pottery: Fort Drum Incised, Fort Drum Punctated, Cane Patch Incised, Gordon’s Pass Incised, Opa Locka Incised, Sanibel Incised; sand-tempered plain persists
Glades IIa	AD 750–900	Appearance of Key Largo Incised and Miami Incised; sand-tempered plain and Opa Locka Incised persist; none of the earlier decorated types are present
Glades IIb	AD 900–1100	Sand-tempered plain and Key Largo Incised persist; Matecumbe Incised appears; none of the earlier decorated types are present; certain rim modifications (incised lip arcs and lip crimping and grooving) also appear for the first time
Glades IIc	AD 1100–1200	Almost no decorated ceramics; some grooved lips but no more lip arcs or crimped rims; Plantation Pinched appears
Glades IIIa	AD 1200–1400	Plantation Pinched is no longer present; Sand-tempered plain and grooved lips persist; appearance of Surfside Incised and St. Johns Check Stamped
Glades IIIb	AD 1400–1513	Glades Tooled, sand-tempered plain and St. Johns Check Stamped are present, Surfside Incised and grooved lips are not present
Glades IIIc	AD 1513–ca.1700	Same as previous period with the addition of historic artifacts

Griffin 1988: 124–142

HISTORICAL OVERVIEW

The following overview traces the historical development of the general project area from the European settlement through the twentieth century. The intent of this historical overview is to serve as a guide to field investigations by identifying the possible locations of any resources within the project APE and to provide expectations regarding the potential historic significance of any such resources. It also provides a context with which to interpret any historic resources encountered during the CRAS.

European Contact and Colonial Period (c. 1513–1821)

Official credit for the discovery of Florida belongs to Juan Ponce de León, whose voyage of 1513 took him along the eastern coast of the peninsula (Tebeau 1971:21). He is believed to have sailed as far north as the mouth of the St. Johns River before turning south, stopping in the Cape Canaveral area and possibly at Biscayne Bay. The expedition then continued southward, following the Florida Keys, making contact with the local Tequesta people en route before turning to the northwest, where they encountered the Calusa along the southwestern Gulf Coast.

Other Spanish explorers followed Juan Ponce de León, and over the next 50 years the Spanish government and private individuals financed expeditions hoping to establish a colony in “La Florida.” In 1565, King Philip II of Spain licensed Pedro Menéndez de Avilés to establish a settlement in St. Augustine, Florida. Settlements with associated missions were established at St. Augustine, San Mateo (Ft. Caroline) and Santa Elena, and smaller outposts and missions were located in Ais, Tequesta, Calusa, and Tocobaga territory (Gannon 1965:29).

In 1567, Brother Francisco Villareal was sent to one of the large Tequesta villages located on Biscayne Bay. In 1568, a skirmish between the Spanish soldiers and the Tequesta Indians temporarily closed the mission. By the end of 1568, the Tequesta were willing to reopen the mission, largely due to the work of Don Diego, a Tequesta who had visited Spain. Despite zealous attempts, the native groups in Florida continued to resist conversion, and in 1572 Jesuit authorities decided to abandon their missionary efforts in Florida.

Another attempt to build a mission in southeastern Florida took place nearly 150 years after the establishment of St. Augustine. Because it was in Spain’s best interest to maintain control along the Florida coastline and alliances with the native groups inhabiting the coast, a missionary effort was supported in the Biscayne Bay area (Parks 1982:55–65). Father Joseph María Monaco and Joseph Xavier Alaña were sent from Cuba in 1743 and arrived at a Native American village located at the mouth of the Miami River. The village did not appear any more receptive towards accepting Christianity than before. After Joseph Xavier Alaña conveyed this to the Governor of Cuba, the mission was closed, and the fort they had erected was destroyed to prevent its fall into hostile hands (Parks 1982:55–65). Although the Spanish were resigned to the fact that missionization and settlement of South Florida came at too high a price, they did strive to maintain good relations with the various native people who lived in the area.

By the beginning of the eighteenth century, the Native American population of South Florida had declined considerably as a result of disease, slave raids, intertribal warfare, and attacks from a new group of Native Americans, the Seminoles. The Seminoles, descendants of Creek Indians, moved into Florida during the early eighteenth century to escape the political and population pressures of the expanding American colonies to the north (Wright 1986:218).

By the end of the eighteenth century, the Seminoles had become the dominant Native American group in the state. Groups of fugitive African American slaves also had settled among the Seminoles by the early nineteenth century (Brown 1991:5–19). Armed conflict with pioneers, homesteaders, and eventually the United States Army resulted in the removal of most of the Seminoles from Florida. This action forced the withdrawal of the remaining Seminole population to the harsh environment of the Everglades and Big Cypress Swamp by the late nineteenth century.

Territorial and Statehood Period (1821–1860)

In 1821, after several years of negotiations with Spain, the U.S. acquired Florida as a territory. The population of the territory at that time was still centered in the northern areas around Pensacola, St. Augustine, and Tallahassee. As more European-American settlers moved into the region, conflicts arose with the Seminole people over available land. Pressure began to bear upon the government to remove the Seminoles from northern Florida and relocate them farther south. The Treaty of Moultrie Creek (1823) restricted the Seminole people to approximately four million acres of land in the middle of the state, running south from Micanopy to just north of the Peace River (Mahon 1967: Rear foldout map). The Seminoles did not approve of this treaty because they were reluctant to move from their established homes to an area that they felt could not be cultivated. Other treaties soon followed such as Payne's Landing (1832) and Fort Gibson (1833), which called for Seminole emigration to the western territories (Mahon 1967:75–76, 82–83). These treaties fostered Seminole resentment of settlers that would culminate in the Second Seminole War in 1835.

At the beginning of the Second Seminole War, the conflict was centered near the Withlacoochee region. In 1838, U.S. troops moved south to pursue the retreating Seminoles into the Lake Okeechobee and Everglades regions. Colonel Zachary Taylor was sent to the area between the Kissimmee River and Peace Creek. Colonel Persifor Smith and his volunteers were dispatched to the Caloosahatchee River, and U.S. Navy Lt. Levi N. Powell was assigned the task of penetrating the Everglades (Mahon 1967:219–220). Powell's detachment had several skirmishes with Seminole people near Jupiter Inlet. Powell established a depot on the Miami River and erected Fort Dallas in the approximate location of present-day downtown Miami. For three months, Fort Dallas was a base of operations as Powell led his men into the Everglades in search of the Seminoles (Gaby 1993:47).

The Second Seminole War had a deleterious effect on new settlement in Florida. To encourage settlement in the middle portion of the territory after the war, the Armed Occupation Act of 1842 offered settlers 160 acres of land at no cost, provided they built a house, cleared five acres, planted crops, and resided on the land for five years. Any head of a family, or single man over 18 years of age and able to bear arms, was eligible to receive a homestead. This act, plus the end of the Second

Seminole War, created a small wave of immigration by Anglo-American pioneers to central Florida. Most of these immigrants were Anglo-American farmers and cattle ranchers, or “crackers,” from the southeastern United States (Gaby 1993). During the latter years of the Territorial Period, South Florida represented a frontier with few European-American settlers who were primarily involved in the milling of lumber and arrowroot.

Miami’s earliest permanent land records date from the Second Spanish Period. John Egan’s grant from the King of Spain was included as part of his son James’s claim after Florida became a territory of the United States in 1821. A commission was set up to validate claims from the Spanish Period. James Egan’s claim for the north bank of the Miami River (640 acres) and his mother Rebecca Egan’s claim for the south bank (640 acres) were validated in 1825. These two grants included most of the original limits of the City of Miami (Robbins, Graham and Chillingworth Examining Counsel 1897). Key West resident Richard Fitzpatrick, formerly of South Carolina, purchased the James Egan grant in 1830 for \$400. By 1833, he had also purchased the Rebecca Egan grant for \$640 and two other grants (Polly and Jonathan Lewis), each 640 acres. These latter two grants were located along the bay, south of Rebecca Egan’s grant. Fitzpatrick cleared the land and was in the process of building a large plantation when the Second Seminole War erupted in late 1835. Early in 1836 Fitzpatrick left the area, and the Seminole Indians burned his plantation to the ground. Just weeks before, as President of the Territorial Council, he had successfully pushed for the creation of Dade County from the larger Monroe County. The United States established Fort Dallas on Fitzpatrick’s property in 1838 and occupied it intermittently until the war ended in 1842 (Figure 6).

By the time the war was over, Richard Fitzpatrick had lost interest in the area and sold his entire holdings to his nephew, William F. English, for \$16,000. English platted the “Village of Miami” on the south bank of the Miami River in 1843 and began building a large plantation house and slave quarters of native oolitic limestone on the north bank. When another Indian outbreak brought the troops back to the Miami River in 1849, English went to California to seek his fortune during the gold rush as a means to finance his new city. He was accidentally killed in California. The Army occupied the English plantation (renamed “Fort Dallas”) improved the two stone buildings he had constructed and added several others.

The troops left a year later, only to return and reactivate Fort Dallas in 1855, at the beginning of the Third Seminole War. During this occupation, the Army again occupied English’s stone buildings. Military engineers also constructed the region’s first road, connecting Fort Dallas with the military outpost at Fort Lauderdale. William Wagner, a settler who followed the troops to the wilderness, decided to stay after the war. Sometime between 1855 and 1858 he built a simple frame house on a creek that branched off the Miami River. This house and English’s slave quarters (Fort Dallas) are now located in Lummus Park and are the only known buildings of the pioneer era that remain in downtown Miami. The Miami Post Office opened in December 1856, receiving mail once a month by boat from Key West. When the Third Seminole War ended, many soldiers settled in the area and Fort Dallas became the nucleus of a permanent community (Patricios 1994:12, 19).

Civil War and Post War Period (1860–1898)

With the beginning of the Civil War, cattle were needed to help feed the Confederate Army. Herds from as far south as central Florida were driven to railheads near the Georgia border. However, cattle ranchers discovered they could sell their herds in Cuba for a greater profit and began dealing with blockade-runners. The Union attempted to stop all shipping from Florida ports, but blockade-runners were too abundant. Cattle ranchers from all over Florida drove their cattle to Punta Rassa to be shipped to Cuba for payment in Spanish gold. It is not known how many cattle were shipped from the port during the Civil War. However, after the war as cattle continued to be shipped, it is reported that in the decade between 1870 and 1879 over 165,000 head were shipped (Grismer 1949).

In the 1880s, interest in the resources of South Florida increased due in large part to people like Hamilton Disston and Henry B. Plant. By 1881, the State of Florida faced a financial crisis involving a title to public lands. On the eve of the Civil War, land had been pledged by the Internal Improvement Fund to underwrite railroad bonds. After the War, when the railroads failed, the land reverted to the State. Almost \$1 million was needed by the state to pay off the principal and accumulated interest on the debt, thereby giving clear title.

Hamilton Disston, son of a wealthy Philadelphia industrialist, contracted with the State of Florida in two large land deals: the Disston Drainage Contract and the Disston Land Purchase. The Drainage Contract was an agreement between Disston and the State in which Disston and his associates agreed to drain and reclaim all overflow lands south of present-day Orlando and east of the Peace River in exchange for one-half the acreage that could be reclaimed and made fit for cultivation. The Disston Land Purchase was an agreement between Disston and the State in which Disston agreed to purchase Internal Improvement Fund Lands at \$1.25 an acre to satisfy the indebtedness of the fund. A contract was signed on June 1, 1881 for the sale of 4,000,000 acres for the sum of \$1 million, the estimated debt owed by the Improvement Fund. Disston was allowed to select tracts of land in lots of 10,000 acres, up to 3,500,000 acres. The remainder was to be selected in tracts of 640 acres (Davis 1938:206–207). Before he could fulfill his obligation, Disston sold half of this contract to a British concern, the Florida Land and Mortgage Company, headed by Sir Edward James Reed (Tischendorf 1954:123).

Disston changed Florida from a wilderness of swamps, heat, and mosquitoes into an area ripe for investment. This enabled Henry B. Plant to move forward with his plans to open the west coast of Florida with a railroad-steamship operation called the Jacksonville, Tampa & Key West Railway. Through the Plant Investment Company, he bought up defunct rail lines such as the Silver Springs, Ocala & Gulf Railroad, Florida Transit and Peninsular Railroad, South Florida Railroad, and Florida Southern Railroad to establish his operation (Mann 1983:68; Harner 1973:18–23). In 1902, Henry Plant sold all of his Florida holdings to the Atlantic Coast Line, which would become the backbone of the southeast (Mann 1983:68).

Private land claims between 1881 and 1883 were probably squatters acquiring the land on which they lived prior to the land transfers under the Disston Land Purchase contract. The flurry of land transfers recorded in the early 1880s was mainly the result of two factors: large influxes of people as a result of the railroads, and the widespread unpopularity of the Disston Land Purchase and Drainage Contracts. The public resented the \$0.25 per acre price Disston paid under the land contract, as they were required to pay \$1.25 per acre under the terms of the Homestead Act of 1876. There were also claims that Disston was receiving title to lands that were not swamplands or wetlands (Tebeau 1971:278). Many residents bought up the higher, better-drained parcels of land for speculation, knowing that the surrounding wetlands and flatwoods would be deeded to Disston under the Land Purchase contract.

In 1874, George M. Thew established the Biscayne Bay Company to purchase several of the original land claims and market the property. Julia Sturtevant Tuttle, a resident of Cleveland, Ohio, moved to Florida in 1891, and was so taken with the old Fort Dallas property that she purchased it from the Biscayne Bay Company for \$2,000.00. She also recognized the importance of transportation if the region was ever to progress. Consequently, she negotiated with railroad magnate Henry Flagler to transfer to him half of her acreage along the Miami River in exchange for bringing the FEC Railway to Miami. Flagler agreed, and by 1896 the railroad arrived. Flagler used some of the land he received from Julia Tuttle to build the Royal Palm Hotel on the north bank of the river across from Brickell's Point (Figure 7). The City of Miami was incorporated three months after the construction of the railroad, with a population of 502 voters. Flagler extended his railway to Homestead, completing the line by 1903 (Mann 1983).

The Florida Coast Line Canal and Transportation Company (FCLCTC) was chartered in 1881 to construct a series of canals connecting existing lakes and rivers between St. Augustine and Lake Worth, Florida. In 1893, railroad mogul Henry Flagler became associated with the company in order to help extend his railroad to the south of the state (Wiggins 1995).

Spanish-American War Period/Turn-of-the-Century (1898–1916)

At the turn-of-the-century, Florida's history was marked by the outbreak of the Spanish-American War in 1898. As Florida is the closest state to Cuba, American troops were stationed and deployed from the state's coastal cities. Harbors in Tampa, Pensacola, and Key West were improved as more ships were launched with troops and supplies. "The Splendid Little War" was short in duration, but evidence of the conflict remained in the form of improved harbors, expanded railroads, and military installations (Miller 1990).

Rapid and widespread growth was the theme of this period in Florida history. Thousands of miles of railroad tracks were laid, including the FEC, Atlantic Coast Line, and Seaboard Air Line railroads. While agriculture, especially the citrus industry, had become the backbone of Florida's economy, manufacturing and industry began growing during the beginning of the century. Fertilizer production, boat building, and lumber and timber products were strong secondary industries (Weaver et al. 1996:3).

In 1904, Governor Napoleon Bonaparte Broward initiated significant reforms in Florida’s politics. Several of Broward’s major issues included the Everglades drainage project, railroad regulation, and the construction of roads. During this time, railroads were constructed throughout the state and automobile use became more prevalent. Improved transportation in the state opened the lines to export Florida’s agricultural and industrial products (Miller 1990). As various products such as fruits and vegetables were leaving the state, people were arriving in Florida. Some entered as new residents and others as tourists. Between 1900 and 1910, the state population increased from 528,542 residents to 752,619. At this time, St. Lucie and Palm Beach counties were established, indicative of the increasing numbers of people moving to the east coast of the state.

In 1909, the construction of the Miami Canal began for the expressed purpose of controlling flooding in western Miami-Dade County and draining the Everglades for agriculture and development (Gaby 1993). Prior to the building of the canal, most of the land west of present-day NW 27th Avenue was flooded sawgrass prairie with isolated hammocks. By the time of its completion in 1912, the Miami Canal had drained most of the eastern portion of the Everglades and opened up land for settlement and development. Consequently, land to the east of the former wetlands became available for development. Much of this “new” land consisted primarily of scrub growth of palmetto, Florida pine, and coconut palms, with mangrove and sawgrass where water was once present (Sessa 1950:2).

A review of the Florida Department of Environmental Protections (FDEP) Tract Book Records (n.d.) indicates that settlement in the region began in the late nineteenth century. Land apportionment within the project area is listed in Table 2 below.

Table 2. Land Apportionment in the Vicinity of the Project Area

Section	Portion Owned	Owner	Date of Deed or Sale
Township 54 South, Range 40 East			
7	All	Richard J. Balles	December 24, 1908

FDEP: n.d.

By 1912, small farming communities of the Redland District materialized west of NW 27th Avenue that was formerly under water (Janus Research 1999:26-27). By 1917, four major canals were draining the Everglades from the southeast end of Lake Okeechobee towards Miami, Ft. Lauderdale, and Boca Raton (Clement 2002). The North New River Canal extended between Lake Okeechobee to the New River and was dredged between 1906 and 1911. A canal extending from the Caloosahatchee River in southwestern Florida was also dredged starting in 1906. Yet another canal was the Florida East Coast Canal (later the Intracoastal Waterway) which was completed in 1911; it stretched from Jacksonville to Biscayne Bay (Clement 2002). A smaller canal, the Snapper Creek Canal was also part of the early drainage system. In the late 1920s, after two hurricanes had devastated the area, Congress passed the River and Harbor Act of 1930 and the construction of levees on the north and south sides of Lake Okeechobee began.

The idea of constructing the Tamiami Trail, a highway across the Everglades, which would link the Gulf and Atlantic coasts in southern Florida, was first promoted by James Franklin Jaudon in 1915. Jaudon, a former Miami-Dade County tax assessor, wanted to develop property he owned in the western Everglades and around Chevalier Bay in northern Monroe County, and believed that construction of the Tamiami Trail would make this feasible (Burnett 1988).

Beginning in 1916, promoters and developers placed advertisements about Miami in northern magazines and newspapers in hopes of attracting more buyers to the area. This advertising expanded yearly (Sessa 1950: 47), and the demand for land gradually increased.

World War I and Aftermath Period (1917–1919)

The World War I and Aftermath period of Florida's history begins with the United States' entry into World War I in 1917. Wartime activity required the development of several training facilities in the state, and protecting the coastlines was a priority at this time. One World War I-era airfield was Chapman Field along Biscayne Bay. Although the conflict only lasted until November 1918, the economy was boosted greatly by the war. For example, the war brought industrialization to port cities such as Tampa and Jacksonville, where shipbuilding accelerated. These cities also functioned as supply depots and embarkation points. An indirect economic benefit of the war was an increase in agricultural production, as beef, vegetables, and cotton were in great demand (Miller 1990).

While Florida industrialization and agriculture flourished, immigration and housing development slowed during the war. Tourism increased as a result of the war in Europe which forced Americans to vacation domestically. Tycoons such as Henry Plant were building hotels and railroads for tourists seeking winter vacations in sunny Florida. These magnates took an interest in the improvements and promotion of Florida in an effort to bring in more tourist dollars. The end of the war marked a slight increase in population.

In 1917, Tamiami Trail promoters, Jaudon, L. T. Highleyman, eventual Supervisor of the Southern Drainage District, and R. E. McDonald purchased 20,000 acres of land in the Everglades from the Trustees of the Internal Improvement Board (Jaudon 1924). Jaudon and a promotion group then convinced Lee, Miami-Dade, and Monroe county officials of the value and feasibility of a road and canal through his landholdings. At the time, there was even serious talk of the construction of a railroad alongside the Tamiami Trail and Canal (Jaudon 1917–1934). Consequently, Miami-Dade County raised \$125,000 and graded a rough road from the eastern part of the county to the edge of the Everglades, while Lee County worked on the western end of the highway. Work on the project temporarily stopped during World War I, when the war and problems connecting the Miami-Dade and Lee County portions delayed the road's completion. Tamiami Trail and Tamiami Canal are near, but outside, of the current project APE.

Miami-Dade County experienced a tremendous amount of growth and development in the years following World War I. Since many areas of South Florida were low-lying and therefore prone to flooding during the rainy season, it was necessary to fill these areas to make them suitable for living (Sessa 1950:6). Another option used by developers to create livable land was to purchase

bay bottom from the State Internal Improvement Fund, apply for permits from the U.S. Army Corps of Engineers to dredge, and then pump their claims in order to create islands. Some of the islands created by this practice of dredging and filling, which began in 1918, included Palm Island, Hibiscus Island, La Gorce Island, Sunset Islands, and Venetian Islands.

By 1917, Miami had a population of 30,000 and two new skyscrapers, the Ralston Building and McAllister Hotel. Eighty-seven new storefronts were added in one year. Miami now had one car for every 13 people, partly a result of the opening of the Dixie Highway promoted by Miami Beach developer Carl Fisher in 1915. Miami also had a new trolley system that ran all the way to Buena Vista, pushing development northward.

Florida Land Boom Period (1920–1929)

After World War I, Florida experienced unprecedented growth. Many people relocated to Florida during the war to work in wartime industries or were stationed in the state as soldiers. Bank deposits increased, real estate companies opened in many cities, and state and county road systems expanded quickly. Earlier land reclamation projects created thousands of new acres of land to be developed. Real estate activity increased steadily after the war's end and drove up property values. Prices on lots were inflated to appear more enticing to out-of-state buyers. Every city and town in Florida had new subdivisions platted and lots were selling and reselling for quick profits. Southeastern Florida, including cities such as Miami and Palm Beach, experienced the most activity, although the boom affected most communities in central and South Florida (Weaver et al. 1996:3).

Between 1919 and 1920, agricultural production in the area reached record levels. In the early 1920s, the real estate "boom" hit Miami-Dade County and the population doubled. The real estate boom was created in part by the desirable sub-tropical climate of the area, the abundance of available land created by the draining of the Everglades, and the visions and schemes of promoters and developers (Parks 1991:107). Real estate was rapidly changing hands and several new residential subdivisions were platted. Near the project area, the Pittsburgh-Miami Land Company purchased acreage to the west of Miami and laid out the plat of "Sweetwater Groves." The Pittsburgh-Miami Investment Company was owned by James J. Marshall (President) and was located across SW 8th Street/Tamiami Trail and Tamiami Canal from the current project area (Miami-Dade County Records Office 1923).

Road building became a statewide concern as it shifted from a local to a state function. These roads made even remote areas of the state accessible and allowed the boom to spread. On a daily basis up to 20,000 people were arriving in the state. Besides the inexpensive property, Florida's legislative prohibition on income and inheritance taxes also encouraged more people to move into the state.

Work on the Tamiami Trail resumed after the war ended. However, by 1921, Lee County had run out of funds, and work again halted (Burnett 1988:41–44). In the meantime, Jaudon surveyed and staked out the most feasible route. In the spring of 1923, a group of Lee County promoters organized a motorcade to attract public interest and demonstrate that automobile travel across the

Everglades was possible. On April 4, 1923, these motorists, called the “Trail Blazers,” left Fort Myers to drive across the flooded and rock-bottomed prairies of the Everglades (Figure 8). The expedition, which consisted of ten cars, 23 men, and two Seminole-Miccosukee guides, took 23 days to reach Miami and captured the attention of the nation as daily reports were wired to the press (Federal Writers’ Project 1984:406; Covington 1993:202; Gaby 1993:163).

Figure 8: Trailblazers on the Tamiami Trail, 1923 (Courtesy of Florida Memory)

This trip stimulated interest in building the highway and also demonstrated the viability of overland automobile traffic across the Everglades. Following this journey, Barron G. Collier, a millionaire tycoon with more than one million acres in southern Lee County, guaranteed completion of the highway. Collier’s guarantee to complete the Tamiami Trail was contingent on the establishment of a new county, to be called Collier County, in what was then southern Lee County. It also required the re-routing of the road across Collier’s holdings in this new county, thereby bypassing Monroe County and Jaudon’s original Chevalier Bay tract.

Collier County officially came into being in 1923 (Tebeau 1966:108). The newly created Collier County issued \$350,000 in bonds to pay for the Tamiami Trail and work began again in 1923. By 1924, Jaudon reported that 42 or 34 miles of the Trail in Miami-Dade County had been completed by the J. B. McCrary Company (Jaudon n.d.). Collier's financing was depleted by 1926, when the State Road Department took over the final 12 miles of the Everglades section of the road, the most difficult, in order to link it with the Miami-Dade County portion, as well as the work from Naples to the Lee County line. When the 143-mile-long Tamiami Trail officially opened on April 25, 1928, it had taken thirteen years to build at a cost of \$13 million (Tebeau 1966:220–232; Burnett 1988:41–44).

In 1923, the President of Seaboard Air Line Railroad, Mr. S. Davies Warfield, initiated a move to extend a line from the existing Coleman station in Sumter County, Florida to West Palm Beach, with the ultimate goal of connecting the line to Miami. After Warfield organized the quick purchase of over 160,000 acres, construction began on the West Palm Beach branch in the summer of 1924. Over 204 miles of nearly straight track from Coleman to West Palm Beach were completed in fall 1925. Immediately following this expeditious construction, work on the line connecting West Palm Beach and Miami was initiated, and by the end of the year the line was extended from Miami to Homestead.

Miami was also an important early center for the aviation industry. In the late 1920s, the Miami International Airport was a small airport on the south side of NW 36th Street and south of Miami Springs, known as Pan American Field. The land was purchased from the Seminole Fruit and Land Company. The small airport consisted of two hangars, two runways, and a terminal building. The terminal building featured a stucco and glass dome, a restaurant, and separate waiting rooms for departures and arrivals and was considered the first modern terminal in the Country. By the end of the 1920s, Pan American Field was the number one airfield in the United States (Miami Air Traffic Control Tower n.d.).

The boom of the 1920s transformed the small southern resort town of Miami into a metropolis. As a resort destination, Miami had a “season” that began in December and ended in early April. The real estate boom was created in part by the desirable sub-tropical climate of the area, the abundance of available land created by the draining of the Everglades, and the visions and schemes of promoters and developers. The boom brought Miami into the national spotlight as investors, speculators, and hopeful new residents poured into town from all over the United States (Parks 1991:107). Nationally known architectural firms like Schultze and Weaver, and Kiehnel and Elliott opened Miami offices and designed major new buildings. Several of the historic buildings that remain in downtown Miami are legacies of the boom era.

In October 1920, the “Chaille Plan” of renaming streets was adopted. Chaille, then a Miami City Council member, proposed a system that would divide Miami into four quadrants. The dividing line separating north from south was Flagler Street (formerly 12th Street), and Miami Avenue (formerly Avenue “D”) separated the east from west quadrants (Kleinberg 1989:106). Bayfront Park and Biscayne Boulevard (formerly Biscayne Drive) were developed on land pumped up from Biscayne Bay that dramatically increased the availability of waterfront land. Before long, scaffolding for new skyscrapers would rise, creating Miami's first skyline. The suburbs were

pushed out in all directions, freeing up more and more central city property for commercial development. The growing popularity of the automobile fueled Miami's growth in the 1920s. The increased mobility of the population, their disposable income and the availability of leisure time resulted in the migration of all classes of people who responded to the marketing of Miami's sub-tropical delights (CMPD 1987:8).

Between 1920 and 1925, the population of Miami more than doubled and large-scale massive efforts were underway to replace the buildings constructed during the city's pioneer days with "modern" ones. During the height of the boom, land prices could double or triple in just one day. Front-page stories in major newspapers replaced paid advertisements as the means of promoting South Florida.

During this period, the city demolished the old docks in order to create new land for a bayfront park and wide boulevards. Several small communities developed throughout Miami-Dade County as new land was acquired and former agricultural areas gave way to subdivisions. Opa-Locka, Miami Springs, Hialeah, Buena Vista, Shorecrest, Allapattah, and Flagami were just a few of the new place names in Miami-Dade County. In 1925, the City annexed Buena Vista, Lemon City, Allapattah, Little River, Silver Bluff, and Coconut Grove thereby creating Greater Miami (Parks 1991:118). The largest of these new subdivisions included Miami Shores, Miami Beach, and Coral Gables.

By the end of 1925, over-speculation and over-development threatened the Miami region's vigorous and unprecedented growth. Housing was scarce, more lots were for sale than could be sold, more acreage was available than could be portioned into subdivisions, and prices were out of proportion to the value (Parks 1991:118; Sessa 1950:353). Then, in August of 1925, the FEC Railway announced an embargo on all carload freight except fuel, petroleum, livestock and perishable goods (Sessa 1950:264-265). Soon after, steamship companies followed suit and refused to bring in any additional goods until buyers cleared out the backlog of goods that existed in warehouses, freight cars, and steamships in Miami. This embargo threatened the economy of the area by delaying or cutting off the arrival of supplies for building contractors and forcing them to lay off workers. Compounding the problems posed by the embargo was an active anti-Florida campaign in the northern states. Major magazines did exposés on the often unscrupulous practices of Florida developers and warned of the dangers of speculating in Florida real estate. Finally, the capsizing of the *Prinz Valdemar*, a World War I era brigantine undergoing renovations, in the middle of the shipping channel in January 1925 prevented the use of the Miami Harbor for 25 days (Parks 1991:120).

Another blow to the boom came with a hurricane in 1926. Despite the warnings that the area was extremely vulnerable to tropical storms and hurricanes, development of the Miami area continued uninterrupted until the hurricane of September 19, 1926. Because there had not been a major storm in Miami-Dade County for 16 years, the 1926 hurricane took the area completely by surprise (Tebeau 1980:387). Before South Florida could completely recover from the storm of 1926, another more powerful hurricane struck the coast near West Palm Beach. The September 16, 1928 storm washed out part of the Okeechobee dike causing massive flooding and casualties (Tebeau 1980:388). Damage to the coastal areas was staggering, and Florida's land boom turned to bust.

By the time the stock market collapsed in 1929, Florida was suffering from an economic depression. Construction activity had halted and industry dramatically declined. Subdivisions platted several years earlier remained empty and buildings stood on lots partially-finished and vacant. The 1929 Mediterranean fruit fly infestation that devastated citrus groves throughout the state only worsened the recession (Weaver et al. 1996).

Within the project area, the collapse of the “boom” period and the devastating hurricane put an end to any plans to develop the “Sweetwater Groves” area platted earlier in the 1920s by the Pittsburgh-Miami Land Company, thus postponing development in and around the project area until after the Depression (City of Sweetwater 2013).

Depression and New Deal Period (1930–1940)

This era of Florida’s history begins with the stock market crash of 1929. As previously discussed, there were several causes for the economic depression in Florida, including the grossly inflated real estate market, two devastating hurricanes, and a fruit fly infestation. During the Great Depression, Florida suffered significantly. Between 1929 and 1933, 148 state and national banks collapsed, more than half of the state’s teachers were owed back pay, and a quarter of the residents were receiving public relief (Miller 1990).

The Depression affected most areas of the state’s economy. Beef and citrus production declined, manufacturing slowed, and development projects were stopped. Even the railroad industry felt the pressures of the 1930s and had to reduce services and employees. In addition, the increasing use of automobiles lessened the demand for rail travel. Despite the Depression, tourism remained an integral part of the Florida economy during this period. New highways made automobile travel to Florida easy and affordable and more middle-class families were able to vacation in the “Sunshine State” (Miller 1990).

During the Great Depression, the Miami region fared better than many areas, as tourism helped keep the local economy active. The city really regained its vigor when it was rebuilt through the policies of President Franklin D. Roosevelt’s New Deal (Sessa 1950:350). Federal Emergency Relief Agency (FERA) funds were released to the unemployed, and the Civilian Conservation Corps (CCC) improved existing parks and made new parks, such as Matheson Hammock and Greynolds Park, which became the nucleus of Miami’s future park system. By 1935, the Works Progress Administration (WPA) was in Miami and new public buildings were constructed. WPA construction projects provided jobs to construction workers. Other WPA projects employed artists, writers, and teachers to teach art to children, prepare guidebooks to Miami, and develop theater and music projects. The Red Cross, WPA, and FERA were the major organizations responsible for funding and labor of the rehabilitation projects throughout the state. However, the American Legion, local and amateur radio stations, volunteers and newspapers also played a valuable role. During the 1930s, Miami continued to attract working middle class tourists who wished to escape the gloom of the Great Depression. By the late 1930s, Miami was experiencing a financial recovery, ahead of most of the rest of the nation.

In the 1930s, Pan American moved most of its operations to Dinner Key where its “flying boat airline” could succeed near the water. Pan American Field was being used primarily for maintenance until Eastern Airlines relocated there in 1934. In 1937, National Airlines followed Eastern and Pan American Field was renamed the 36th Street Airport (Miami Air Traffic Control Tower n.d.).

Disaster struck on Labor Day of 1935, when a devastating hurricane with wind speeds of more than 200 miles per hour hit South Florida and the Keys, killing thousands and causing several million dollars in building damage. The major fatalities were World War I veterans working on the Overseas Highway extension who were housed in tents and temporary barracks (Hopkins 1986:51).

Following the storm, businesses and homes were destroyed, as was Flagler’s railroad, which was in receivership; the bankruptcy courts ruled against rebuilding. The FEC Railway went bankrupt; the railroad was abandoned, and its tracks and cars lay in ruins (Wilkinson n.d.: 1).

Development in and around the project area had not occurred even though Sweetwater Groves had been platted in the 1920s. Figure 3 shows the project area in 1938 and the lack of development beyond a few isolated homesites and the Tamiami Trail and Tamiami Canal. Interest in the land near the project area was rekindled in 1938, when Clyde Andrews purchased most of the lots within the “Sweetwater Groves” tract and began marketing them. At this time, a troupe of Russian little people who worked for a circus purchased most of the lots as retirement homes. The retired circus troupe settled in Sweetwater and constructed several small-scaled homes that accommodated their stature. For many years, Sweetwater was known as the “midget” community (City of Sweetwater 2013).

It was also at this time that the Sweetwater Bridge, located near the project APE, was erected (circa 1938), three years before the incorporation of the town in 1941. This bridge originally carried SW 109th Avenue across the Tamiami Canal and remained the only bridge connecting Sweetwater to the Tamiami Trail until 1970 when a bridge on SW 107th Avenue was constructed (Metropolitan Dade County Historic Preservation Board 1984).

World War II and the Post-War Period (1941–1949)

From the end of the Great Depression until after the close of the post-war era, Florida’s history was inextricably bound with World War II and its aftermath. It became one of the nation’s major training grounds for the military including foreign fighters. Prior to this time, tourism had been the state’s major industry. During the War, tourism was brought to a halt as tourist and civilian facilities, such as hotels and private homes, were placed into wartime service. The influx of thousands of servicemen and their families increased industrial and agricultural production in Florida and introduced these new residents to the warm weather and tropical beauty of Florida.

Railroads once again profited, since servicemen, military goods and materials needed to be transported. However, airplanes were now becoming the new form of transportation, and Florida continued to be an important center for the airline industry. The highway system was also being

expanded at this time. The State Road Department constructed 1,560 miles of highway during the war era (Miller 1990).

In 1941, the community of “Sweetwater Groves” was incorporated as the Town of Sweetwater. Joe Sanderlin, who served as the Russian circus little people troupe’s guardian and manager, was elected the first mayor (City of Sweetwater 2013).

With the outbreak of World War II, the military and federal expenditures in the state tripled the income of the entire state and the population increased by roughly 25 percent. Miami and Miami Beach became integral to the war effort by providing war camps and major training centers for the Armed Forces. By the end of 1942, many of the area’s once empty hotels had become barracks for the Army Air Force Officers Candidate School, an Officers Training School and a basic training center. Other hotels were turned into hospitals, golf courses were transformed into drill fields, fancy restaurants and clubs became mess halls, and churches and synagogues were used for classrooms. The establishment of the Homestead Army Air Base greatly influenced the expansion of south Miami-Dade’s economy. The base was primarily utilized as a transportation depot and training station for the Air Transport Command. The base facilities were rebuilt and reactivated under the auspices of the Strategic Air Command (George 1995:136–137).

After the war, there was a huge influx of cash from federal agencies. The Federal Security Administration built roads, bridges and public improvements. Tourism quickly rebounded and once again became a major source of the state’s economy. The end of the war also brought an influx of new residents to the area as former soldiers who had trained in Florida decided to settle in the state permanently. Consequently, Miami experienced a post-war boom. The Veterans Administration began to disburse millions of dollars in benefits to ex-GIs. The Federal Housing Authority guaranteed the financing of 15,000 new homes each year (Safford 1950:58). Between 1940 and 1950, the population nearly doubled, and new subdivisions of small concrete block homes dotted what had once been the outskirts of Miami (Parks 1991:168–170).

Sometime between the years 1944 and 1947, the establishment of the original Tamiami Airport took place (Figure 9). This airport was located on the property that would eventually become the FIU campus. This earlier airport should not be confused with the present-day Miami Executive Airport, which is located farther to the southwest. The original Tamiami Airport was damaged by a hurricane in 1947, which flooded the runways and caused training operations to be temporarily shifted to Opa-Locka Airport (Freeman 2013).

Figure 9: 1947 aerial photograph showing Tamiami Trail (US 41) looking west with Tamiami Airport in the left background (Courtesy of George W. Young)

The flooding associated with a 1945 storm and two smaller hurricanes in 1947 prompted the Florida Legislature to create the Central & Southern Florida Flood Control District. The organization, renamed the South Florida Water Management District in 1972, was responsible for designing, building, and maintaining the massive system of canals, levees, and pumping stations protecting low-lying communities and opening new areas to development (Mormino 2005). While the post-war economic boom, expansion of the Air Command base, and improved flood control combined to spur unprecedented growth in south Miami-Dade County, these factors also put pressure on the federal government to protect the Everglades from encroaching development. President Harry S. Truman dedicated Everglades National Park during ceremonies in the town of Everglades on December 6, 1947; a smaller ceremony was held that afternoon at Florida City, acknowledging the town as the eastern gateway and only entrance by road into the park (Tebeau 1968:180). With the establishment of the park, the Miccosukee lands within its boundaries became property of the federal government and many were forced to move to reservations set aside for them (Downs 1982).

Modern Period (1950 to present)

By 1950 the population of the City of Miami had reached 172,000 residents while the county had reached 495,000 people. During the 1950s, the incorporation of several municipalities in Miami-Dade County signaled that the population was indeed swelling. By 1955, the county population was up to 715,000 residents. In 1956, the Miami NAACP chapter demanded an end to segregation in Miami-Dade County buses and a federal suit was filed to end segregation in public Florida schools. The first Black police station was constructed in a few years earlier in 1951. In 1959, The Miami-Dade County school board accepted four black students at Orchard Villa Elementary, becoming the first integrated public school in Florida. In 1960, Downtown Miami was the first place in Florida to integrate lunch counters and integration was ordered at the Miami police training school.

One of the most significant developments in Miami's history during the second half of the twentieth century was the influx of tens of thousands of Cuban immigrants to the United States. Fidel Castro's rise to power in Cuba led to the exodus of over 800,000 Cubans over the course of a 35-year span. The most dramatic impact came from the periods shortly before and after the ousting of Cuban dictator Fulgencio Batista in 1959. "The first emigres who came in 1958 were, according to the history of the time, followers of General Fulgencio Batista, the dictator who had taken power in a 1952 military coup" (Wasem 2009). Predicting the political shift, many of Batista's followers fled to Miami.

After Fidel Castro took power in 1959, the exodus escalated and peaked in 1962 with the arrival of approximately 78,000 refugees. Cuba's upper and middle classes were those most likely to suffer from Castro's communist reign and were the first group to flee. This exodus led to a general 'brain drain' from Cuba. As many of these early refugees were urbanites with formal educations, training, and business experience they found South Florida a natural fit and worked to relocate their businesses and Cuban culture to South Florida.

This wave of immigration made Miami one of the nation's largest immigration ports in the latter half of the twentieth century. Cuban immigrants created their own ethnic communities within Miami, particularly in areas such as Hialeah and Little Havana (formerly known as Riverside/Shenandoah). Because many of those arriving in the first wave of immigration possessed professional and business backgrounds, the economies of these ethnic communities boomed, creating jobs and industry for Spanish speakers in the area. The Cuban Refugee Program and Refugee Emergency Center were established in 1960 by the federal government, in cooperation with social service organizations and religious groups, notably the Catholic Archdiocese of Miami. The emergency center was established in the Miami Daily News Tower in downtown. When it reopened, the building was renamed the Freedom Tower. The Freedom Tower quickly became a symbol of the refuge immigration for Miami's Cuban community.

The Cuban population in the United States grew almost six-fold within a decade, from 79,000 in 1960 to 439,000 in 1970. While thousands of these immigrants initially resettled throughout the United States, many returned to Miami. At the time of the 1960 census, over 40% of Florida's

foreign-born population resided in Miami-Dade County. Nearly 60% of all Cubans in the United States resided in Miami thirty years after the immigration wave began (Gannon 1996: 404-406).

The third wave of Cuban immigration occurred during what is now referred to as “The Mariel Boatlift.” Castro’s communist regime generally prohibited emigration but on several occasions, he allowed people to leave without repercussion. The largest instance was the 1980 Mariel Boatlift during which approximately 124,800 Cubans fled to Florida by boat (Batalova and Zong 2017; Nolin 2016; Wasem 2009). Immigrants of this time period were referred to in Spanish as “Marielitos.”

Under the Cuban Adjustment Act of 1966, immigrants who resided in the United States after one year were eligible to become lawful permanent residents. However, mounting costs of accepting so many immigrants from the Mariel Boatlifts forced Congress to establish the “Immigration Emergency Fund” in the 1986 Immigration Reform and Control Act. This Fund provided federal aid to “regions and communities facing more general health and safety problems due to overcrowded and unsuitable living conditions that rise when mass migration occurs” (Wasem 2009).

During the 1950s, the original Tamiami Airport remained a busy general aviation airport. During the Cuban Missile Crisis in 1962, a surplus control tower from Miami International Airport (“Old Tower #5”) was reassembled at the original Tamiami Airport, presumably to handle an influx of deployed military aircraft. The original Tamiami Airport was listed in the 1962 Aircraft Owners and Pilots Association (AOPA) Airport Directory as having three asphalt runways. The operators were listed as Avex Inc., American Aviation, Embry Riddle Aviation, Howe Aviation, Kendall Flying School, Miami Executive Aircraft, Mike’s Flying Service, Great Southern Aircraft Corp., and Tursair Inc. (Freeman 2013). Figure 10 below shows the original Tamiami Airport on a historic aerial from 1956 and Figure 11 shows its location on a historic map. Figure 12 shows the Kendall Flying School, located at the Tamiami Airport (Freeman 2013).

(Courtesy of Paul Freeman)

Figure 12: An undated photo of a Piper Tri-Pacer in front of the office of Kendall Flying School Inc. at Tamiami Airport (Courtesy of Paul Freeman)

By the late 1950s, Sweetwater had seen much development and attracted a population of over 500 people. The little town boasted a town hall, church, grocery store, service station, and 183 private residences. A two-man police force, as well as a volunteer fire department, was established to patrol the town.

The Palmetto Expressway was constructed in 1960, and construction of the Dolphin Expressway began in 1967 and was opened to the public in 1969. Originally called the East-West Expressway, it was renamed the Dolphin Expressway after the Miami Dolphins won the Superbowl in 1973 and in 1974. The construction of these roads impacted the town of Sweetwater drastically. With easier access to Miami, the small town quickly became a popular choice of residency.

By the mid-1960s, most of the tenants at Tamiami Airport had relocated to Opa-Locka Airport. In 1967, the original Tamiami Airport (near the project area) was replaced by the new Tamiami Airport (Freeman 2013). Figure 4 is an aerial from 1968 that shows that the airport had been decommissioned and non-airport related development was beginning to grow in the previous airport boundaries. The APE was devoid of any historic resources in the 1968 aerial. In 1965, Florida Senator Robert M. Haverfield introduced Senate Bill 711, which instructed the State Board of Education and the Board of Regents (BOR) to begin planning for the development of a state university in Miami. Governor W. Haydon Burns signed the bill into law in June 1965, which was the first step in the creation of FIU (FIU 2013).

In the summer of 1969, founding FIU president Charles E. Perry and three other men, Butler Waugh, Donald McDowell and Nick Sileo, worked to create FIU on the site of the old Tamiami Airport. The campus was laid out to place the former air traffic control tower for Tamiami Airport in the center of campus and designed FIU's Ivory Tower. The tower remains on the campus today, but is located outside of the current project area (Figures 13–14). FIU opened its doors in 1972 to 5,667 students, which was the largest opening enrollment in U.S. collegiate history (FIU 2013).

Figure 13: Chuck Perry, Butler Waugh, Nick Sileo, and Donald McDowell at the old Tamiami Airport tower in September 1969 to officially mark the beginning of FIU
(Courtesy of FIU News)

Figure 14: FIU's first president, Charles Perry, standing in front of the University sign, circa 1970s (Courtesy of FIU Photographic Archive)

The first class to graduate had 191 students and commencement was held in June 1973. When Chuck Perry left the presidency in 1975, there were over 10,000 students attending classes and a campus with five major buildings and a sixth being planned (FIU 2013).

Under the tenure of President Gregory Wolfe, FIU made the transition from a two-year, upper-division school with limited graduate programs into a university with a lower division and doctoral programs. The legislature approved the proposal, and in August 1981 the first-ever freshmen and sophomores started to attend classes at FIU. In 1984, FIU received the authority to begin offering degree programs at the doctoral level (FIU 2013).

In addition to the growing curriculum, groundbreaking was held in October 1983 for the first on-campus residence halls at North Campus, which housed 550 students. A \$10 million housing facility for 738 students opened at University Park in 1985. By the time President Wolfe retired in 1986, FIU had grown to more than 16,500 students and facilities were rapidly increasing (FIU 2013).

In 1986 when President Modesto A. "Mitch" Maidique was appointed, FIU was ranked by the Carnegie Foundation for the Advancement of Teaching as a Master's university. Today, it is classified as a Doctoral/Research University-Extensive - the highest, most prestigious ranking. The University also opened a 38-acre satellite campus, the Engineering Center one-half mile from the main University campus. The face of FIU's campuses has also changed dramatically under President Maidique's leadership. More than \$600 million was spent on construction of new

facilities or renovation and expansion of existing facilities, including the \$40 million eight-story Green Library at University Park, one of the largest in the state system. Several other major construction projects have also taken place, which continue to expand the facilities to meet the ever-growing needs of the University. In recent years, FIU has also become one of the community's major cultural centers (FIU 2013).

In the latter half of the twentieth century, Hurricane Andrew was the single event having the greatest impact on south Miami-Dade County. On August 24, 1992, the category four storm struck the area; Florida City and Homestead were among the communities hit hardest by the hurricane. With winds over 150 mph, Andrew destroyed approximately 85 percent of Florida City's buildings and more than 50 percent of its historic architecture. The hurricane's effects are still evident, with numerous vacant lots and bare foundations throughout the community. In Homestead, more than 99 percent (1,167 of 1,176) of all mobile homes were completely destroyed (Mayfield et al. 1994). The category four storm damaged 75 percent of Homestead Air Force Base, prompting Defense officials to close the active duty base and move military units and families. Since then, the base has been divided, with about 75 percent turned over to the base closure agency and the remainder serving as an Air Force reserve station (*Mobile* 1999).

DRAFT

FLORIDA MASTER SITE FILE SEARCH AND LITERATURE REVIEW

An archaeological and historical literature and background information search pertinent to the project area was conducted to determine the types, chronological placement, and location patterning of cultural resources within the archaeological APE. A review of FMSF data, previous surveys, property appraiser records, and historical research material was conducted to determine the potential for cultural resources within the project APE that are listed, eligible, or considered eligible for listing in the National Register, or that have potential or confirmed human remains. The FMSF is an important planning tool that assists in identifying potential cultural resources issues and resources that may warrant further investigation and protection. It can be used as a guide but should not be used to determine the State Historic Preservation Officer's (SHPO) official position about the significance of a resource.

Previously Conducted Cultural Resource Surveys

The work of previous investigators was reviewed to gather information about the types of precontact and early historic period sites that could be expected to occur within the project APE. A search of pertinent literature and records was conducted to determine the locations of significant and potentially significant resources within the APE, as well as any archaeological and historical assessments of tracts of land within the APE.

A search of FMSF and in-house data identified three previously conducted cultural resource surveys that contain the project APE. FMSF Manuscript Nos. 340, 602, and 2127 are County-wide surveys that did not comprehensively survey the project APE for archaeological or historic resources. .

Previously Recorded Archaeological Resources

A search of the FMSF data did not identify any previously recorded archaeological sites within or adjacent to the archaeological APE. The closest archaeological site is the Tamiami Airport (8DA91) site, a Glades period midden located approximately .025 miles to the northeast of the APE. It was first documented by D. D. Laxson during the 1950s and revisited by Robert Carr in 1978. The FMSF form notes that this site had been heavily disturbed by a residential development and has not been evaluated by the SHPO. A review of in-house and local cultural resources data identified no Miami-Dade County-designated archaeological sites or zone within the archaeological APE.

Previously Recorded and Potentially Historic Resources

The FMSF data did not identify any previously recorded cultural resources within or adjacent to the historic resources APE. Although the Miami-Dade County Property Appraiser and GIS information indicated that the parcel containing the project area has an actual year built (AYRB) dates of 1972, the review of aerial photographs from 1968, 1971, and 1973 (FDOT, Surveying and Mapping Office 1996–2019) showed that the project area was vacant during the late 1960s and early 1970s. Figure 4 shows the project APE on a 1968 aerial.

METHODS

Archaeological Survey Methods

The archaeological field survey included a surface inspection that consisted of a visual inspection of exposed ground to look for evidence of archaeological sites within the archaeological APE and document current conditions. No subsurface testing was feasible within the APE due to the presence of existing hardscape, landscaping, gravel, spoil piles, underground utilities. Standard archaeological methods for recording field data were followed throughout the project. Current field conditions were recorded on maps of the archaeological APE included in Attachment B.

Historic Resources Survey Methods

A visual inspection was conducted to ensure that any resource built during or prior to 1972 within the historic resources APE was identified, mapped, and photographed. The historic resources survey used standard field methods to identify and record historic resources. All resources within the APE received a preliminary visual reconnaissance. Any resource with features indicative of 1972 or earlier construction materials, building methods, or architectural styles was noted on aerial photographs and a USGS Quadrangle map.

In addition to a search of the FMSF, GIS datasets were utilized to approximate construction dates within the project corridor. GIS datasets usually yield the majority of the historic resources located within the project corridor. The project architectural historian identified any resource not accounted for by this information in the field based on aforementioned methods.

Each resource's individual significance was then evaluated for its potential eligibility for inclusion in the National Register. Historic physical integrity was determined from site observations, field data, and photographic documentation. Concentrations of historic resources within or adjacent to the APE were assessed in terms of the potential for inclusion in historic districts. If a potential historic district was present, each resource's present condition, location relative to other resources, and distinguishing neighborhood characteristics were noted and photographed for accurate assessment of National Register Historic District eligibility.

Local Informants and Certified Local Government Coordination

Local informants may often provide valuable information which is otherwise not available through official records or library collections. Miami-Dade County is listed on the September 16, 2019 list of Certified Local Governments (CLG) posted on the Florida Division of Historical Resources' website (FDHR 2019). Mr. Jeff Ransom, Miami-Dade County Archaeologist was contacted on January 10, 2020 and Ms. Sarah Cody, Historic Preservation Chief for Miami-Dade County, was contacted on January 14, 2020 for comment on the proposed project. Mr. Ransom responded on January 13, 2020 that his office did not have any cultural resources concerns regarding the project. As of the date of this report, no response has been received from Ms. Cody's office.

PROJECT RESEARCH DESIGN AND SITE LOCATION MODEL

The background research and literature review, in conjunction with pertinent environmental variables, contributed to the formulation of project-specific field methods designed to locate and evaluate previously unrecorded archaeological sites within the archaeological APE. Four environmental factors are typically used to help predict site locations: distance to fresh (potable) water, topography, distance to hardwood hammocks, and soil type (soil drainage).

Fresh water is an important resource, as the need for water is universal. This variable would have been of greater importance during the Paleoindian and Early Archaic periods (12,000–5000 BC) when the perched water system was more restricted. The APE was formerly located in the Everglades, which would have provided ample access to fresh water. The APE is low and lacks significant topographic features. Elevation ranges between 3 and 7 feet ASL.

The presence of tree islands or hardwood hammocks serve as reliable indicators of site location in southern Florida. Their use by precontact, Seminole and modern hunters, campers and permanent residents is well documented. One obvious reason for their use is that they are not prone to flooding, except during episodes of very high water. Yet, hammocks are moist enough to retard the development and spread of fires. The thick foliage of hammocks also provides a great deal of shade as well as serving to moderate temperatures year-round. The thick canopies of hammocks also provide good shelter during periods of heavy weather. Mature hammocks are noted for a lack of ground cover vegetation due to the closed canopy above shading out younger trees, herbs and shrubs. Thus, mature hammocks offer enough open space for habitation and activity areas. Many fruits, nuts and tubers are available in hammocks that are important as human food sources as well as for their ability to attract game animals. The review of aerial photographs did not identify any hammocks or tree islands within the APE.

In southern Florida, historic period sites frequently co-occur with precontact archaeological sites. This is often the result of environmental conditions found desirable by both groups: better-drained uplands near transportation routes (i.e., historic trails and major rivers). The review of the 1845 historic plat map did not identify any military forts, roads, encampments, battlefields, or historic Native American villages or trails within or adjacent to the APE.

The characteristics of soils have been used successfully by researchers to formulate predictive models for precontact site location. In general, soils with an organic pan, with underlying marl or clays, and with slow to moderate internal drainage tend to retain water or be inundated. Areas with a low elevation relative to perched water systems tend to be wet or inundated. Although wet areas can contain abundant wildlife and plant resources, they make poorer habitation areas when better-drained locations are available. The APE is on poorly drained soils associated with the Everglades.

Currently, the proposed project is located in vacant lot that has been drained and filled. The lot contains hardscape, landscaping, grass, gravel parking area, spoil piles, and underground utilities. Based on the nature of the proposed improvements, the analysis of environmental variables, and the level of modification within the project area, the archaeological APE was determined to have a low probability of containing intact archaeological sites.

RESULTS AND CONCLUSIONS

No newly or previously recorded archaeological sites were identified within the project APE. The pedestrian survey confirmed the low archaeological potential of the archaeological APE. The visual inspection of the project area identified spoil piles, areas elevated by fill, and several underground utilities. No subsurface testing was conducted due to the presence of hardscape, landscaping, gravel, spoil piles, and underground utilities. Representative photos of the archaeological APE are included in Figures 6–8. Notes on current conditions are illustrated in Appendix B.

No historic resources or features associated with the historic airport were identified during the field reconnaissance.

Figure 15: Parking Lot in the Archaeological APE from SW 17th Court, Facing Northeast

Figure 16: Utilities along the Western Boundary of the Archaeological APE, Facing East

Figure 17: Hardscape and Utilities in the Archaeological APE, Facing Southeast

Unanticipated Finds

Although unlikely, should construction activities uncover any archaeological material, it is recommended that activity in the immediate area be stopped while a professional archaeologist evaluates the material. If human remains are found during construction or maintenance activities, Chapter 872.05, *F.S.* applies and the treatment of human remains will conform to Chapter 3 of the FDOT *CRM Handbook*. Chapter 872.05 states that, when human remains are encountered, all activity that might disturb the remains shall cease and may not resume until authorized by the District Medical Examiner or the State Archaeologist. The District Medical Examiner has jurisdiction if the remains are less than 75 years old or if the remains are involved in a criminal investigation. The State Archaeologist may assume jurisdiction if the remains are 75 years of age or more.

Curation

A copy of this report is curated at the FMSF. A survey log is included in Appendix C. Field notes and other pertinent project records are temporarily stored at Janus Research until their transfer to the FDOT storage facilities.

DRAFT

**APPENDIX A:
PROJECT INFORMATION**

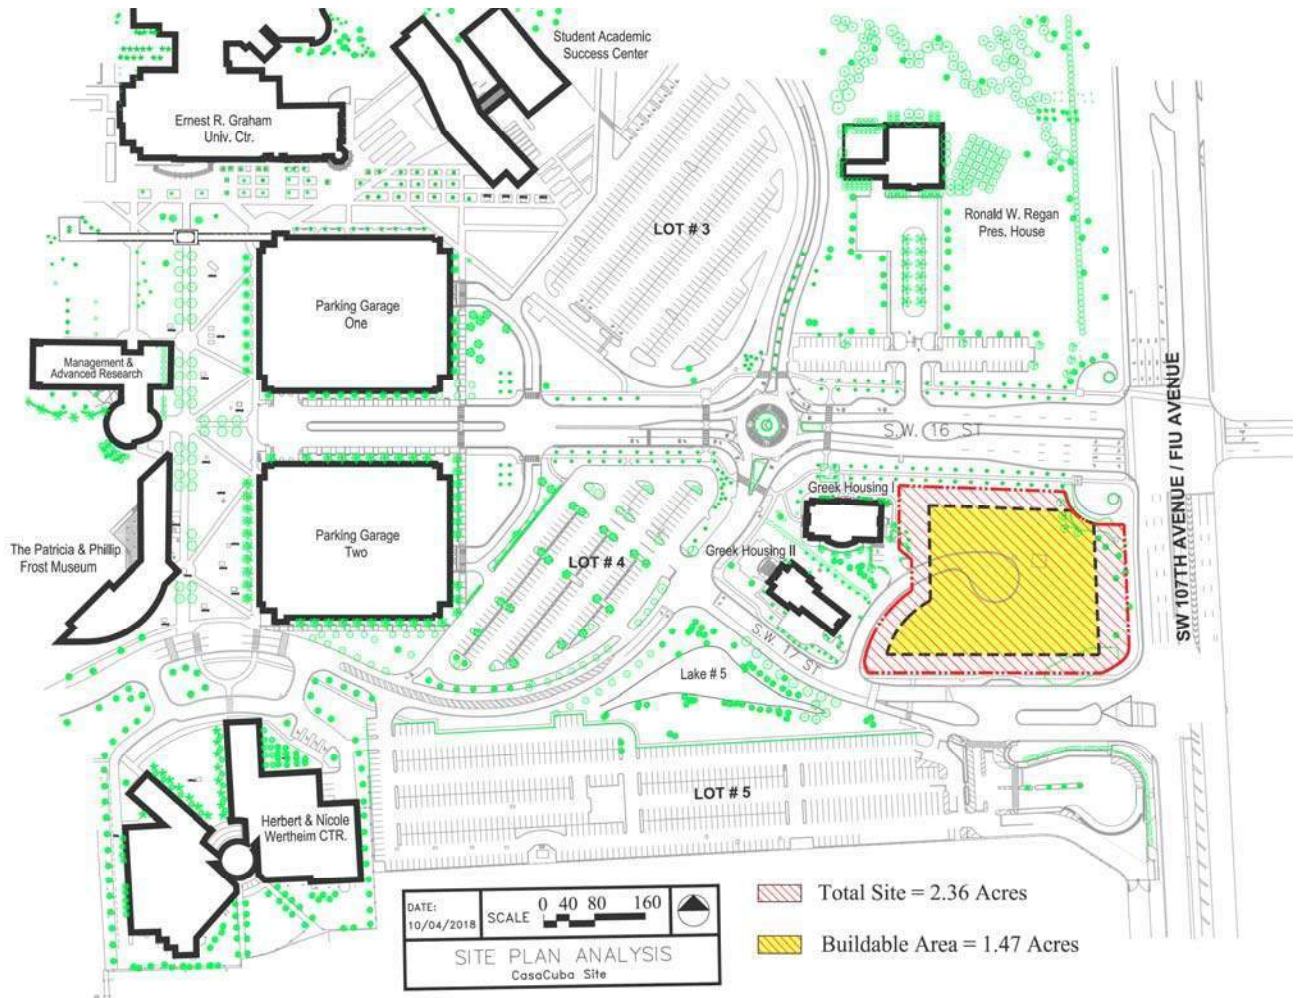

VII. ANALYSIS OF IMPACT ON MASTER PLAN

The project is consistent with required elements of the campus master plan including Future Land Use and academic/support facilities described in the Capital Improvement element to accommodate future needs.

VIII. SITE ANALYSIS

The site selected for CasaCuba is on the east side of MMC fronting SW 107th Avenue between SW 16th and SW 17th streets. The building should be located so as not to diminish service and emergency vehicle access for the adjacent buildings.

VIII. SITE ANALYSIS (continued)

VIII. SITE ANALYSIS (continued)

Particular attention must be given to the layout of the building footprint and site arrangement to achieve the following:

- Create a memorable, iconic building image from at a distance for pedestrians on campus and vehicles on 107th Avenue with a readily identifiable main entrance.
- Develop a building plan that establishes a clear linkage with neighborhood facilities allowing for easy pedestrian access between buildings.
- Maintain vehicular access to existing buildings for drop-off, deliveries and unloading/loading trash removal service and emergency vehicles. Maintain access to existing building support facilities including trash rooms, electrical and mechanical rooms, etc.
- VIP and valet parking should be considered.
- Re-work campus roadways and service drives as required.

FLORIDA DEPARTMENT of STATE

RON DESANTIS
Governor

LAUREL M. LEE
Secretary of State

Stuart M. Grant
Florida International University
11555 SW 17th Street
Miami, Florida 33199

April 20, 2020

RE: DHR Project File No.: 2020-1299, Received by DHR: March 5, 2020
Cultural Resources Assessment Survey for the Florida International University Casacuba Project Miami-Dade County, Florida

Dear Mr. Grant:

Our office received and reviewed the above referenced project for possible effects on historic properties listed, or eligible for listing, on the *National Register of Historic Places* (NRHP). The review was conducted in accordance with Section 106 of the *National Historic Preservation Act of 1966*, as amended, and its implementing regulations in *36 CFR Part 800: Protection of Historic Properties*.

In December 2019, Janus Research, Inc., (Janus) conducted the above referenced cultural resource assessment survey (CRAS) on behalf of Florida International University (FIU), in compliance with requirements for a National Endowment for the Humanities (NEH) grant associated with the proposed CasaCuba museum and cultural center at FIU. The survey area is heavily disturbed, and Janus encountered no cultural resources within the 2.36-acre area of potential effect (APE) during their investigation. Janus concluded that this project will have no effect on cultural resources listed, or eligible for listing, in the NRHP, and recommends no additional work in the APE.

Based on the information provided, our office concurs with the presented survey results and recommendations, and determined that the proposed project will likely have no effect on historic properties listed, or eligible for listing, on the NRHP, or otherwise of historical, architectural, or archaeological value. Further, we find the submitted report complete and sufficient in accordance with Chapter 1A-46, *Florida Administrative Code*. If I can be of any further help, or if you have any questions about this letter, please feel free to contact Clete Rooney at Cletus.Rooney@dos.myflorida.com.

Sincerely,

Timothy A. Parsons, Ph.D.
Director, Division of Historical Resources
and State Historic Preservation Officer

**FIU PUBLIC NOTICE OF PREPARATION OF
A DRAFT ENVIRONMENTAL ASSESSMENT**

DRAFT

National Endowment for the Humanities (NEH)

PUBLIC NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL ASSESSMENT

Posted April 23, 2020

Proposed CasaCuba: A Center for Discussion & Study of Cuban Affairs & Preservation of Cuban Heritage

Approximate Address 1651 SW 107 Court, Miami, FL 33199 - NEH Grant / FAIN # CHA-264405-19

Florida International University is providing public notice that a draft Environmental Assessment (EA) is being prepared in accordance with the National Environmental Policy Act (NEPA) 42 USC §4331 et seq. and its implementing regulations at 40 CFR Parts 1500-1508, and the NEH's NEPA Implementing Procedures (84 FR 23805).

The National Endowment for the Humanities provides discretionary Infrastructure and Capacity Building Challenge Grants under the National Foundation on the Arts and the Humanities Act of 1965 (P. L. 89-209, as amended; 20 USC §956 et seq.) to help institutions secure and sustain their core humanities activities for the long term.

Florida International University proposes to use NEH funds for the design and construction administration of a +/- 58,000 square foot humanities center that includes exterior parking, curbing, sidewalks, utilities, landscaping and signage. The proposed construction will take place at a +/-1.87 acre site, approximately located at 1651 SW 107th Court, Miami, FL 33199.

Florida International University is preparing an Environmental Assessment (EA) that documents potential impacts of the proposed action and proposed alternatives on the human and natural environment. This notice also invites public comments on the proposed project in accordance with Executive Order 11988, Floodplain Management.

The approved building program, design guidelines and other information for this proposed project are available at <https://facilities.fiu.edu/projects/BT-925.htm>

Please contact FIU Planning Coordinator Stuart Grant via email at stuart.grant@fiu.edu if you have any questions or would like additional information on the proposed project.

IPaC RESOURCE LIST

DRAFT

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Miami-Dade County, Florida

Local office

South Florida Ecological Services Field Office

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species¹ and their critical habitats are managed by the [Ecological Services Program](#) of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries²).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact [NOAA Fisheries](#) for [species under their jurisdiction](#).

1. Species listed under the [Endangered Species Act](#) are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the [listing status page](#) for more information.
2. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME

STATUS

Florida Bonneted Bat <i>Eumops floridanus</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8630	Endangered
Florida Panther <i>Puma (=Felis) concolor coryi</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/1763	Endangered
Puma (=mountain Lion) <i>Puma (=Felis) concolor</i> (all subsp. except <i>coryi</i>) No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6049	SAT

There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/1110	

Fishes

NAME	STATUS
Atlantic Sturgeon (gulf Subspecies) <i>Acipenser oxyrinchus</i> (=oxyrhynchus) desotoi	Threatened
There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/651	

Insects

NAME	STATUS
Bartram's Hairstreak Butterfly <i>Strymon acis bartrami</i>	Endangered
There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/4837	

Florida Leafwing Butterfly <i>Anaea troglodyta floridalis</i> There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/6652	Endangered
Miami Blue Butterfly <i>Cyclargus (=Hemiargus) thomasi bethunebakeri</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/3797	Endangered

Flowering Plants

NAME	STATUS
Beach Jacquemontia <i>Jacquemontia reclinata</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/1277	Endangered
Blodgett's Silverbush <i>Argythamnia blodgettii</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6823	Threatened
Cape Sable Thoroughwort <i>Chromolaena frustrata</i> There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/4733	Endangered
Carter's Mustard <i>Warea carteri</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/5583	Endangered
Carter's Small-flowered Flax <i>Linum carteri carteri</i> There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/7208	Endangered
Crenulate Lead-plant <i>Amorpha crenulata</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6470	Endangered
Deltoid Spurge <i>Chamaesyce deltoidea</i> ssp. <i>deltoidea</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/199	Endangered
Everglades Bully <i>Sideroxylon reclinatum</i> ssp. <i>austrofloridense</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4735	Threatened

Florida Brickell-bush <i>Brickellia mosieri</i> There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/956	Endangered
Florida Pineland Crabgrass <i>Digitaria pauciflora</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/3728	Threatened
Florida Prairie-clover <i>Dalea carthagenensis floridana</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/2300	Endangered
Florida Semaphore Cactus <i>Consolea corallicola</i> There is final critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/4356	Endangered
Garber's Spurge <i>Chamaesyce garberi</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8229	Threatened
Pineland Sandmat <i>Chamaesyce deltoidea pinetorum</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/1914	Threatened
Sand Flax <i>Linum arenicola</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4313	Endangered
Small's Milkpea <i>Galactia smallii</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/3360	Endangered
Tiny Polygala <i>Polygala smallii</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/996	Endangered

Ferns and Allies

NAME	STATUS
Florida Bristle Fern <i>Trichomanes punctatum</i> ssp. <i>floridanum</i> No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8739	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

1. The [Migratory Birds Treaty Act](#) of 1918.
2. The [Bald and Golden Eagle Protection Act](#) of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern <http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php>
- Measures for avoiding and minimizing impacts to birds <http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php>
- Nationwide conservation measures for birds <http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf>

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern](#) (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME

BREEDING SEASON (IF A
BREEDING SEASON IS INDICATED
FOR A BIRD ON YOUR LIST, THE
BIRD MAY BREED IN YOUR
PROJECT AREA SOMETIME WITHIN
THE TIMEFRAME SPECIFIED,
WHICH IS A VERY LIBERAL
ESTIMATE OF THE DATES INSIDE
WHICH THE BIRD BREEDS
ACROSS ITS ENTIRE RANGE.
"BREEDS ELSEWHERE" INDICATES
THAT THE BIRD DOES NOT LIKELY
BREED IN YOUR PROJECT AREA.)

<p>American Kestrel <i>Falco sparverius paulus</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA</p>	Breeds Apr 1 to Aug 31
<p>Bald Eagle <i>Haliaeetus leucocephalus</i> This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626</p>	Breeds Sep 1 to Jul 31
<p>Black Skimmer <i>Rynchops niger</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/5234</p>	Breeds May 20 to Sep 15
<p>Black-whiskered Vireo <i>Vireo altiloquus</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA</p>	Breeds May 1 to Aug 15
<p>Common Ground-dove <i>Columbina passerina exigua</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA</p>	Breeds Feb 1 to Dec 31
<p>Least Tern <i>Sterna antillarum</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA</p>	Breeds Apr 20 to Sep 10
<p>Limpkin <i>Aramus guarauna</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Jan 15 to Aug 31

<p>Magnificent Frigatebird <i>Fregata magnificens</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Oct 1 to Apr 30
<p>Mangrove Cuckoo <i>Coccyzus minor</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Apr 20 to Aug 20
<p>Prairie Warbler <i>Dendroica discolor</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds May 1 to Jul 31
<p>Prothonotary Warbler <i>Protonotaria citrea</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Apr 1 to Jul 31
<p>Reddish Egret <i>Egretta rufescens</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/7617</p>	Breeds Mar 1 to Sep 15
<p>Short-tailed Hawk <i>Buteo brachyurus</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/8742</p>	Breeds Mar 1 to Jun 30
<p>Swallow-tailed Kite <i>Elanoides forficatus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8938</p>	Breeds Mar 10 to Jun 30
<p>White-crowned Pigeon <i>Patagioenas leucocephala</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/4047</p>	Breeds May 1 to Sep 30
<p>Yellow Warbler <i>Dendroica petechia gundlachi</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA</p>	Breeds May 20 to Aug 10

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is $0.25/0.25 = 1$; at week 20 it is $0.05/0.25 = 0.2$.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (—)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

American Kestrel
 BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Bald Eagle
 Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)

Black Skimmer
 BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Black-whiskered Vireo
 BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Common Ground-dove
 BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

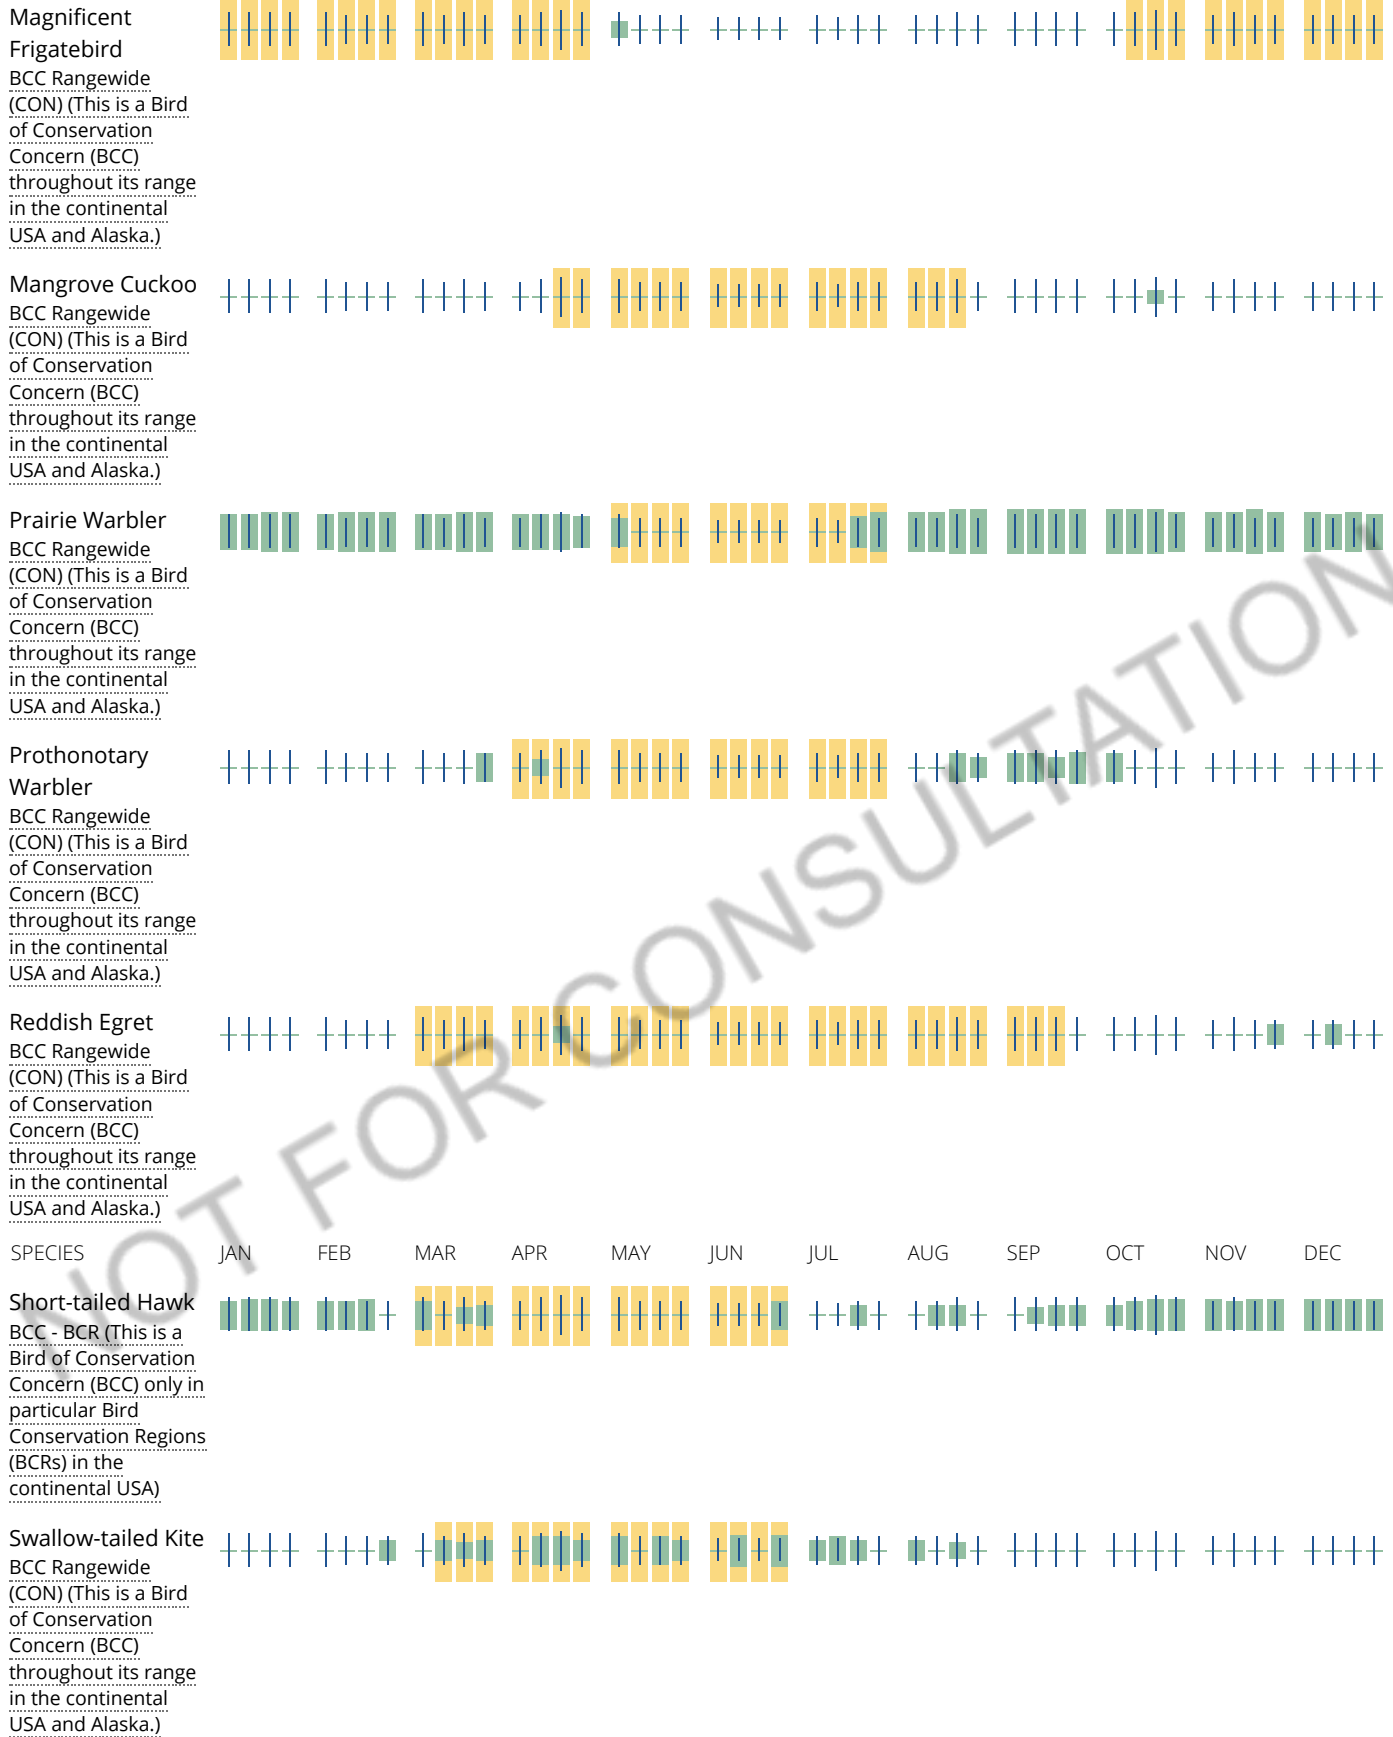

Least Tern
 BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Limpkin
 BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) and/or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [AKN Phenology Tool](#).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: [The Cornell Lab of Ornithology All About Birds Bird Guide](#), or (if you are unsuccessful in locating the bird of interest there), the [Cornell Lab of Ornithology Neotropical Birds guide](#). If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to

look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Marine mammals

Marine mammals are protected under the [Marine Mammal Protection Act](#). Some are also protected under the Endangered Species Act¹ and the Convention on International Trade in Endangered Species of Wild Fauna and Flora².

The responsibilities for the protection, conservation, and management of marine mammals are shared by the U.S. Fish and Wildlife Service [responsible for otters, walrus, polar bears, manatees, and dugongs] and NOAA Fisheries³ [responsible for seals, sea lions, whales, dolphins, and porpoises]. Marine mammals under the responsibility of NOAA Fisheries are **not** shown on this list; for additional information on those species please visit the [Marine Mammals](#) page of the NOAA Fisheries website.

The Marine Mammal Protection Act prohibits the take (to harass, hunt, capture, kill, or attempt to harass, hunt, capture or kill) of marine mammals and further coordination may be necessary for project evaluation. Please contact the U.S. Fish and Wildlife Service Field Office shown.

1. The [Endangered Species Act](#) (ESA) of 1973.
2. The [Convention on International Trade in Endangered Species of Wild Fauna and Flora](#) (CITES) is a treaty to ensure that international trade in plants and animals does not threaten their survival in the wild.
3. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following marine mammals under the responsibility of the U.S. Fish and Wildlife Service are potentially affected by activities in this location:

NAME

West Indian Manatee *Trichechus manatus*
<https://ecos.fws.gov/ecp/species/4469>

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

(Contact the FNAI Data Services Coordinator at 850.224.8207 or kbrinegar@fnai.fsu.edu for information on an official Standard Data Report)

NOTE: The Biodiversity Matrix includes only rare species and natural communities tracked by FNAI.

Report for 1 Matrix Unit: 66452

Descriptions

DOCUMENTED - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit.

DOCUMENTED-HISTORIC - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit; however the occurrence has not been observed/reported within the last twenty years.

LIKELY - The species or community is *known* to occur in this vicinity, and is considered likely within this Matrix Unit because:

1. documented occurrence overlaps this and adjacent Matrix Units, but the documentation isn't precise enough to indicate which of those Units the species or community is actually located in; or
2. there is a documented occurrence in the vicinity and there is suitable habitat for that species or community within this Matrix Unit.

POTENTIAL - This Matrix Unit lies within the known or predicted range of the species or community based on expert knowledge and environmental variables such as climate, soils, topography, and landcover.

Matrix Unit ID: 66452

**EXECUTIVE ORDER 11988:
FLOODPLAIN MANAGEMENT MEMORANDUM**

DRAFT

Memorandum

PROJECT:	Florida International University’s CasaCuba Project
TO:	National Endowment for the Humanities (NEH) Challenge Grants Program (Grant No. CHA-264405-19)
SUBJECT:	Executive Order 11988: Floodplain Management

Executive Order (EO) 11988, Floodplain Management, directs federal agencies to take action to reduce the risk of flood loss; minimize the impacts of floods on human safety, health, and welfare, and restore and preserve the natural and beneficial values, served by floodplains. The following is a summary of 8-Step procedures documenting the compliance with EO 11988 for the Florida International University (FIU) CasaCuba project.

FIU plans to build an approximate 57,876 gross-square-foot facility located within FIU’s Modesto A. Maidique campus in Miami, Florida. This facility, known as CasaCuba, will host public lectures, academic conferences, digital exhibits, research projects, engaging museums, historical societies, and other academic and cultural institutions through meaningful partnerships.

STEP 1: Determine if the proposed action is in the base floodplain: As shown in the attached Floodzones map, the Project Area is entirely within the Federal Emergency Management Agency’s (FEMA) 100-yr floodzone (AH).

STEP 2: Early public review: Public notice is provided along with the draft Environmental Assessment (EA) public notice on the CasaCuba website (<https://casacuba.fiu.edu/news/index.html>). Information on the proposed project is also available to the public via FIU’s website at <https://facilities.fiu.edu/projects/BT-925.htm>.

STEP 3: Identify and evaluate alternatives to locating in the base floodplain: As the majority of FIU’s campus is located within the 100-year floodplain, no practicable alternatives outside of the floodplain were considered as there is limited undeveloped space for a new development of this size on University property. The preferred alternative including the building footprint and site arrangement was selected in order to fulfill the following considerations:

- Create a memorable, iconic building image from a distance for pedestrians on campus and vehicles on SW 107th Avenue with a readily identifiable main entrance.
- A building plan that establishes a clear linkage with neighborhood facilities allowing for easy pedestrian access between buildings.
- Maintain vehicular access to existing buildings for drop-off, deliveries and unloading/loading trash removal service and emergency vehicles.
- Maintain access to existing building support facilities including trash rooms, electrical and mechanical rooms, etc.
- Consideration of VIP and valet parking
- Potential re-work of campus roadways and service drives
- Provide square footage for multipurpose classrooms, exhibition spaces, offices and conference rooms essential for fulfilling the project needs.

FIU's historical collections focused on Cuba are widely distributed across various locations throughout the University, which limits their accessibility. A No-Action Alternative would maintain this limitation and would limit the University's ability to accomplish the project's goals of documenting, preserving, and sharing the history, experiences, and legacy of Cuba with researchers and the general public.

STEP 4: Identify impacts of proposed action: The project site was previously cleared and graded and is part of the larger development of the University; therefore, improvements would be made on property already developed above the 100-year floodplain. Although these improvements would involve work within the horizontal limits of the 100-year floodplain, no work would be performed below the 100-year flood elevation.

STEP 5: Minimize harm and restore and preserve natural and beneficial values: All structures will be built to satisfy minimum base flood elevation standards. Similarly, any modifications to drainage structures included in the proposed project would result in an insignificant change in their capacity to carry floodwater. These changes would cause minimal increases in flood heights and flood limits. These minimal increases would not result in any significant adverse impacts or any significant change in flood risks or damage.

STEP 6: Reevaluate alternatives. Since there is no work proposed below floodplain elevations, reevaluation of alternatives is not necessary.

STEP 7: Findings and public explanation: There is no involvement with regulatory floodways and no impacts to the floodplain are anticipated. Therefore, the proposed project would not encroach upon the base floodplain and complies with EO 11988. If deemed necessary, a public workshop will be scheduled.

STEP 8: Implement proposed action in compliance with minimization plans and flood insurance requirements: If work is found to be necessary below the 100-year flood elevation, mitigation of any flood management impacts will be required and undertaken as part of the necessary Environmental Resource Permitting (ERP) process, resulting in no significant impact to regulated floodplains.

National Endowment of the Humanities

Public Notice

Notice of Availability of the Draft Environmental Assessment and Floodplain Notice

For

CasaCuba: A Leading Center to Foster Global Understanding and Collaboration on Cuban and Cuban American Affairs

To: All Interested Agencies, Groups, and Individuals

This is to give notice that Florida International University (FIU) has conditionally received a Challenge Infrastructure and Capacity Building Grant (CHA-264405) from the National Endowment for the Humanities (NEH). FIU proposes to build CasaCuba, an approximately 57,876 gross-square-foot humanities center located at FIU's Modesto A. Maidique campus in Miami, FL. 11200 SW 8th Street Miami, FL, 33199. The proposed construction will take place on a +/-2.36-acre site, located to the west of SW 107th Avenue between SW 16th Street and SW 17th Street.

In accordance with the National Environmental Policy Act (NEPA) of 1969 and NEH's implementing guidance, an EA is being prepared to assess the potential impacts of the proposed alternatives on the human and natural environments. This public notice invites public comments on the proposed project in accordance with NEPA and Executive Order 11988, Floodplain Management.

The approved building program, design guidelines and other information for this proposed project are available at <https://facilities.fiu.edu/projects/BT-925.htm>. Additional information may be obtained by contacting: Florida International University, Attn: Stuart Grant, Facilities Planning Coordinator, Stuart.grant@fiu.edu.

The draft EA and floodplain notice is available online at <https://casacuba.fiu.edu/news/index.html> for review between /October 15, 2020 and November 14, 2020/. Written comments regarding this environmental action should be submitted no later than 5 pm on /November 14, 2020/, to Florida International University, Attn: Stuart Grant, Facilities Planning Coordinator, Stuart.grant@fiu.edu.

If no substantive comments are received by this deadline, the draft EA and associated Finding of No Significant Impact (FONSI) will become final and be published by NEH. Substantive comments will be addressed as appropriate in the final documents.

DRAFT

NATIONAL ENDOWMENT FOR THE HUMANITIES

OFFICE OF GRANT MANAGEMENT

August 12, 2020

Chris Stahl, Clearinghouse Coordinator
Office of Intergovernmental Programs
Florida Department of Environmental Protection
3900 Commonwealth Boulevard
Tallahassee, Florida 32399-3000

SUBMITTED VIA EMAIL TO State.Clearinghouse@FloridaDEP.gov.

Re: Federal Agency Negative Determination under the Coastal Zone Management Act, 16 U.S.C. §§ 1451-1464, as amended for Challenge Infrastructure and Building Capacity Grant CHA-264405

Dear Mr. Stahl:

The National Endowment for the Humanities (NEH) has awarded Florida International University (FIU) a Challenge Infrastructure and Building Capacity Grant (CHA-264405) to establish Casa Cuba: A Leading Center to Foster Global Understanding and Collaboration on Cuban and Cuban American Affairs. This letter provides the State of Florida with the National Endowment for the Humanities' Negative Determination under Section 307 of the Coastal Zone Management Act, 16 U.S.C. § 1456, as amended, its implementing regulations 15 CFR 930.35 15 CFR § 930.35.

Funding will be used to design and oversee construction of a 50,000 square foot, 3-story, premier humanities center on the main campus at 16th St and 107th Avenue, Miami, Florida, 33165. The site is located on the east side of the Modesto A. Maidique Campus and includes the construction of a courtyard, gardens, and limited parking facilities. The roadway and service drives will also be reconstructed. The project site and building planning and design are consistent with the [2010-2020 Campus Master Plan Update](#), including future land use and academic/support facilities described in the capital improvement element to accommodate future needs.

The project area is approximately 2.36 acres in size and located to the west of SW 107th Avenue between SW 16th Street and SW 17th Street. It is in Section 7 of Township 54 South, Range 40 East on the Hialeah (1988) US Geological Survey (USGS) quadrangle map. Attachment 1 contains a map of the site location. The vacant site has been previous disturbed. Urban land, which generally consists of parking lots, streets, sidewalks, buildings, and other structures where natural soil cannot be observed. Open areas of this soil type typically contain udorthents that have usually been altered by grading, shaping, and/or the addition of up to 18 inches of stony fill

material (USDA 1996:21–22). The paved road is still present, along with sidewalks, a basketball court, an area of grass and gravel used as parking, and landscaping. Above-ground and buried utilities are present throughout the site.

After review of the Florida Coastal Management Program and its enforceable policies (Attachment 2), NEH has made a negative determination that this activity will have any direct or indirect effects on the state of Florida's coastal zone or its resources. This letter is incorporated into a draft National Environmental Policy Act Environmental Assessment (EA) and Draft Finding of No Significant Impact (FONSI) which will be available for public comment for a period of 30 days. Issuance of a final EA and FONSI are contingent in part on the State's agreement with NEH's consistency determination.

Should you have any questions please feel free to contact me at apiesen@neh.gov, or at 240.354.1729.

Sincerely,

Ann Piesen
Federal Preservation and Environmental Officer
National Endowment for the Humanities

cc: Robert Gutierrez, Assistant Vice President for Research, Florida International University

Attachment 1 Site map

Attachment 2

Florida Statutes of the Florida Coastal Management Program

Statute	Consistency	Scope
Chapter 161 <i>Beach and Shore Preservation</i>	The proposed project will not involve construction on State beaches and would not adversely affect beach and shore management.	Authorizes the Bureau of Beaches and Coastal Systems within DEP to regulate construction on or seaward of the states' beaches.
Chapter 163, Part II <i>Growth Policy; County and Municipal Planning; Land Development Regulation</i>	Site and building planning and design will conform to the 2010-2020 Campus Master Plan Update, dated March 2014, adopted March 27, 2014.	Requires local governments to prepare, adopt, and implement comprehensive plans that encourage the most appropriate use of land and natural resources in a manner consistent with the public interest.
Chapter 186 <i>State and Regional Planning</i>	The proposed project is consistent with required elements of the FIU campus master plan including Future Land Use and academic/support facilities described in the Capital Improvement element to accommodate future needs.	Details state-level planning requirements. Requires the development of special statewide plans governing water use, land development, and transportation.
Chapter 252 <i>Emergency Management</i>	The proposed action will not increase the state's vulnerability to natural disasters. Emergency response and evacuation procedures would not be impacted by the proposed action.	Provides for planning and implementation of the state's response to, efforts to recover from, and the mitigation of natural and manmade disasters.
Chapter 253 <i>State Lands</i>	The project site is within the FIU Modesto Maidique Campus. FIU is an agency of the State of Florida and the campus land is leased to FIU but owned by the State of Florida. The proposed project is consistent with FIU's use of State lands.	Addresses the state's administration of public lands and property of this state and provides direction regarding the acquisition, disposal, and management of all state lands.
Chapter 258 <i>State Parks and Preserves</i>	Recreational areas and aquatic preserves will not be affected by the proposed action.	Addresses administration and management of state parks and preserves.
Chapter 259 <i>Land Acquisition for</i>	The project does not involve the acquisition of property.	Authorizes acquisition of environmentally endangered

Statute	Consistency	Scope
<i>Conservation or Recreation</i>		lands and outdoor recreation lands.
Chapter 260 <i>Florida Greenways and Trails Act</i>	The proposed project does not involve the use or creation of recreational trails.	Authorizes acquisition of land to create a recreational trails system and to facilitate management of the system.
Chapter 267 <i>Historical Resources</i>	NEH and Florida State Historic Preservation Office determined the project will have no effect on cultural resources listed, or eligible for listing, in the National Register of Historic Places.	Addresses management and preservation of the state's archaeological and historical resources.
Chapter 288 <i>Commercial Development and Capital Improvements</i>	The proposed project aims to enhance the business and economic activity in the area by helping the community connect with resources that help advance their individual and organizational goals and focus on economic development.	Provides the framework for promoting and developing the general business, trade, and tourism components of the state economy.
Chapter 334 <i>Transportation Administration</i>	The proposed project will not have an impact on transportation.	Addresses the state's policy concerning transportation administration.
Chapter 339 <i>Transportation Finance and Planning</i>	The proposed project will have no effect on the finance and planning needs of the state's transportation system.	Addresses the finance and planning needs of the state's transportation system.
Chapter 373 <i>Water Resources</i>	Wetlands will not be disturbed, as there are no wetlands within the footprint of the proposed action. An increase in impervious surface from the proposed action will go through the South Florida Water Management District permitting process, if needed. The proposed action will not significantly impact the floodplain.	Addresses the state's policy concerning water resources.
Chapter 375 <i>Multipurpose Outdoor Recreation; Land Acquisition, Management, and Conservation</i>	Opportunities for recreation on state lands will not be affected.	Develops comprehensive multipurpose outdoor recreation plan to document recreational supply and demand, describe current recreational opportunities,

Statute	Consistency	Scope
		estimate need for additional recreational opportunities, and
<i>Chapter 376 Pollutant Discharge Prevention and Removal</i>	Solid waste generated by the proposed facility will be similar to that generated by the existing facilities on campus and will be handled under the University's current waste disposal contract.	Regulates transfer, storage, and transportation of pollutants, and cleanup of pollutant discharges.
<i>Chapter 377 Energy Resources</i>	Energy resource production, including oil and gas, and the transportation of oil and gas, will not be affected by the proposed action.	Addresses regulation, planning, and development of energy resources of the state.
<i>Chapter 379 Fish and Wildlife Conservation</i>	The proposed project is within a developed urban area and there will be no impact to wildlife resources. The project does not involve any in water construction.	Addresses the management of the wildlife resources of the state.
<i>Chapter 380 Land and Water Management</i>	Site and building planning and design will conform to the 2010-2020 Campus Master Plan Update, dated March 2014, adopted March 27, 2014. The Project will be designed to meet water quality standards in order to secure the necessary regulatory permits.	Establishes land and water management policies to guide and coordinate local decisions relating to growth and development.
<i>Chapter 381 Public Health, General Provisions</i>	The proposed project will not affect public health facilities.	Establishes public policy concerning the state's public health system.
<i>Chapter 388 Mosquito Control</i>	The proposed action will not affect ecological systems and water quality of state waters regarding mosquito control. The proposed project will include, at a minimum, any necessary on-site water quality treatment and best management practices as required by the South Florida Water Management District.	Establishes public policy concerning environmental control in the state.
<i>Chapter 553 Building and Construction Standards</i>	Impacts to soils will not be significant. Standard erosion control measures will be implemented during	Provides for the control and prevention of soil erosion, and for the prevention of

Statute	Consistency	Scope
	<p>construction. If the project will “disturb” over one acre of soil and discharge storm water, then a “Generic Permit for Stormwater Discharge from Large and Small Construction Activities under 62-621.300(4)(a) FAC will be required. The proposed action is located within the 100-year coastal floodplain.</p>	<p>floodwater and sediment damages.</p>
<p>Chapter 597 <i>Aquaculture</i></p>	<p>The proposed action would not affect aquaculture efforts.</p>	<p>Enhance the growth of aquaculture, while protecting Florida's environment.</p>

FIU NOISE RECEPTOR MEMORANDUM

DRAFT

OFFICE OF FINANCE & ADMINISTRATION

January 8, 2020

Mr. Colin Henderson
TY Lin International
201 Alhambra Circle
Suite 900
Coral Gables, Florida 33134

**Re: Ownership of properties adjacent to the CasaCuba site; East Side of Florida
International University Modesto Maidique Campus**

Dear Mr. Henderson:

There are two buildings adjacent to the CasaCuba site. Both buildings are owned in fee simple by the Florida International University Board of Trustees. Formerly, these buildings were used as dormitories for members of the Phi Gamma Delta and Pi Kappa Phi fraternities. The residential use of both buildings was discontinued in calendar year 2018. Currently, the buildings are unoccupied and moving forward, all use will be office and/or educational in nature.

Please, do not hesitate to contact me if you have any question or need additional information.

Sincerely,

A handwritten signature in blue ink, appearing to read "K. Jessell", with a long horizontal line extending to the right.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's PCTO1--Petroleum Contamination Detail Report.

A review of the LUST list, as provided by EDR, and dated 07/30/2019 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal Brownfields sites

BROWNFIELDS: Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination.

A review of the BROWNFIELDS list, as provided by EDR, has revealed that there is 1 BROWNFIELDS site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Site Status: CLOSED

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FALG INC	1569 SW 107TH AVE	NE 0 - 1/8 (0.044 mi.)	B18	106
MOBIL CAR WASH SERVI	1809 SW 107TH AVE	SSE 0 - 1/8 (0.119 mi.)	30	120

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 285159

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 215547

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 68580

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 68580

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110054121696

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 12/09/2019

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/25/2019	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/13/2019	Source: Department of the Navy
Date Data Arrived at EDR: 08/20/2019	Telephone: 843-820-7326
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/07/2019
Number of Days to Update: 6	Next Scheduled EDR Contact: 02/24/2020
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/19/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/20/2019	Telephone: 703-603-0695
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/22/2019
Number of Days to Update: 6	Next Scheduled EDR Contact: 03/09/2020
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/19/2019	Source: Environmental Protection Agency

State- and tribal - equivalent CERCLIS

SHWS: Florida's State-Funded Action Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 12/06/2018

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

State and tribal Brownfields sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

Date of Government Version: 10/03/2019

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Department of Children & Families

Source: Provider Information

Telephone: 850-488-4900

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Target Property Map: 5655634 HIALEAH, FL
Version Date: 2012

Southeast Map: 5655660 SOUTH MIAMI, FL
Version Date: 2012

Southwest Map: 5655662 SOUTH MIAMI NW, FL
Version Date: 2012

Northwest Map: 5655636 HIALEAH SW, FL
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
12086C0288L	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
12086C0269L	FEMA FIRM Flood data
12086C0432L	FEMA FIRM Flood data
12086C0451L	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
HIALEAH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
22	1/4 - 1/2 Mile South	SE
1G	1/4 - 1/2 Mile South	SE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Pleistocene
Code: Qp (*decoded above as Era, System & Series*)

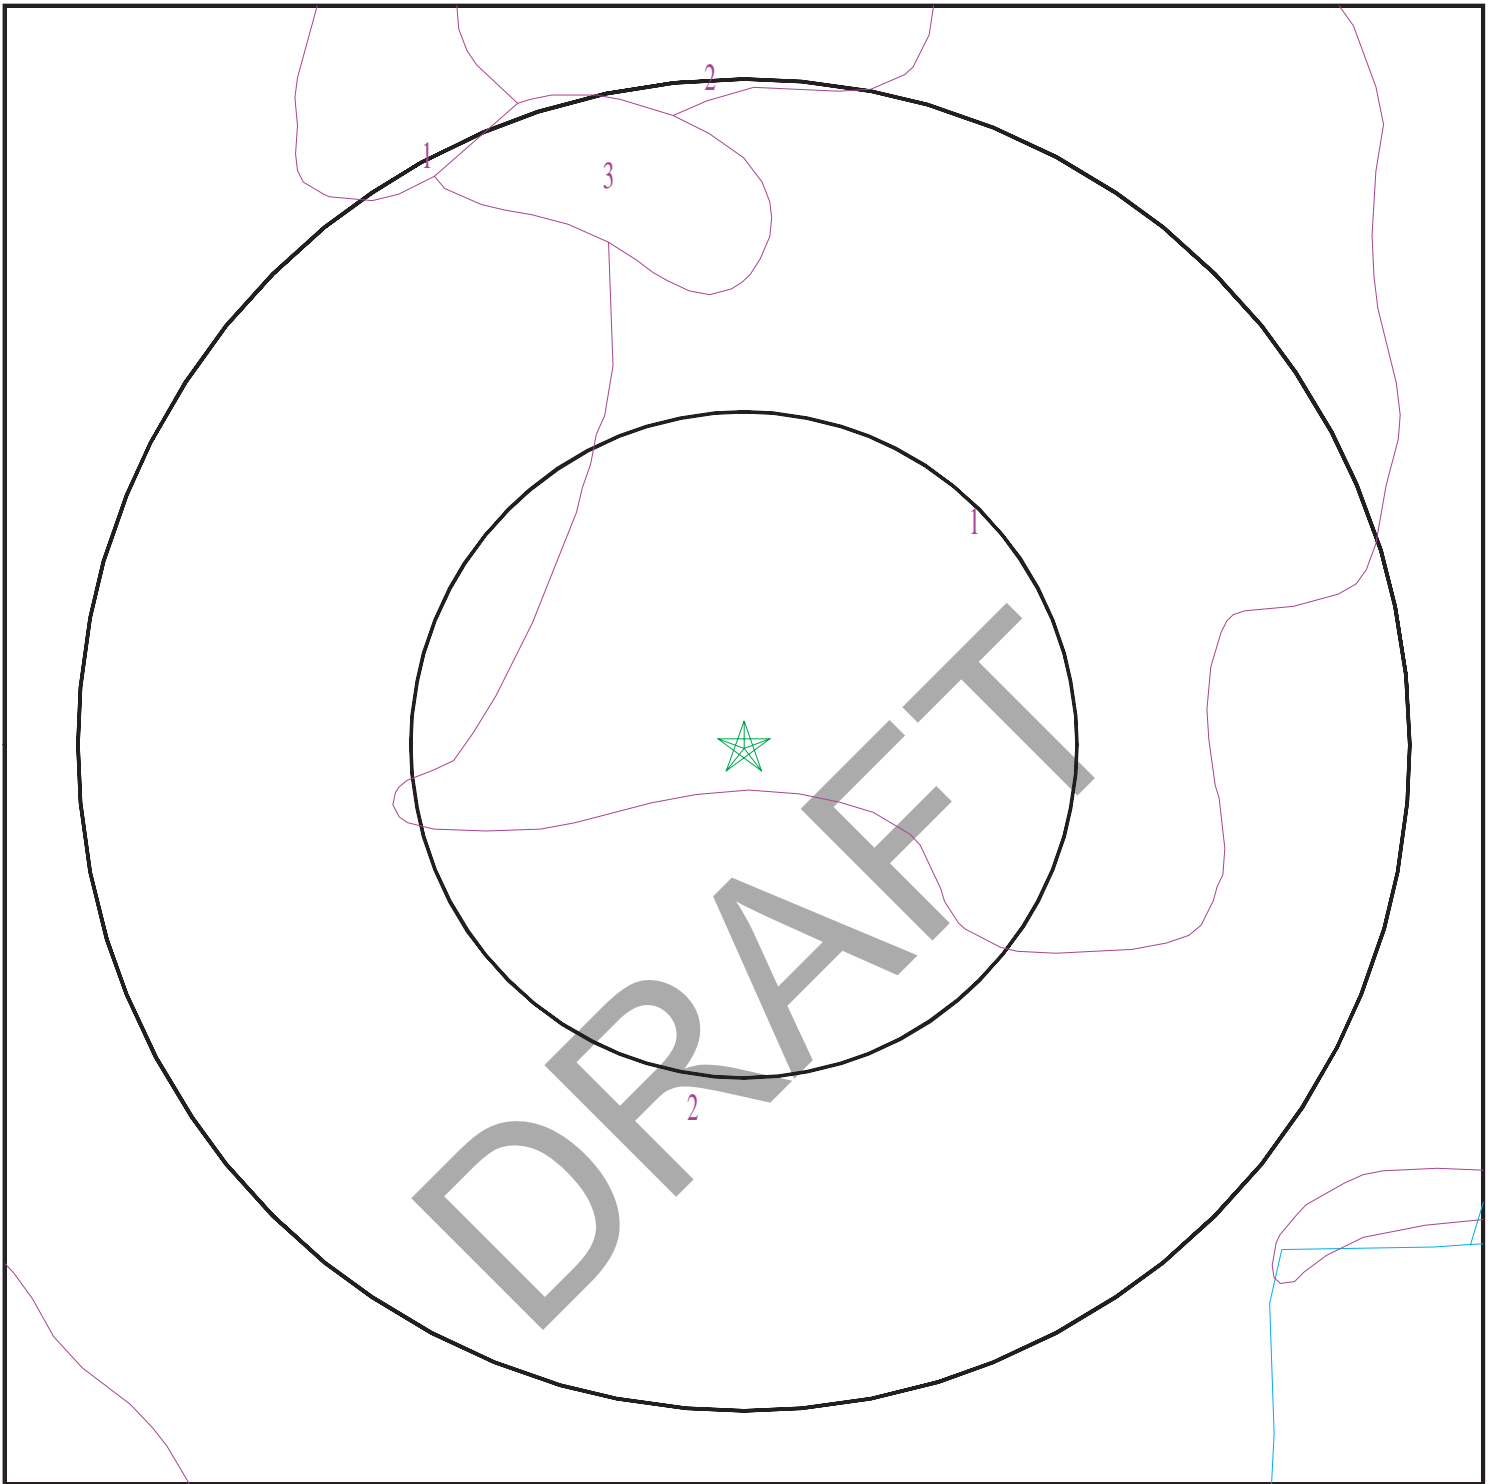

GEOLOGIC AGE IDENTIFICATION

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Hallandale

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	3 inches	16 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	16 inches	16 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: water

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	0 inches	water	Not reported	Not reported	Max: Min:	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by T.Y.Lin Int'l/H.J. Ross Assoc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

SKETCH AND LEGAL DESCRIPTION

SOURCES OF DATA:

The Legal Description of the Subject Parcels of Land was generated from information provided by the client. In addition, the following sources of data were used to the extent required to complete this document in a defensible manner. That is to say:

– North Arrow and Bearings refer to an assumed value of S02°17'11"E along the East line of Section 7–54–40, Miami–Dade County, Florida. Said line is considered well–established and monumented.

CLIENT INFORMATION:

This Sketch and Legal Description was prepared at the insistence of:

Florida International University

LIMITATIONS:

Since no other information other than what is cited in the Sources of Data was furnished, the Client is hereby advised that there may be legal restrictions on the subject property that are not shown on the Sketch that may be found in the Public Records of Miami–Dade County, or any other public and private entities as their jurisdictions may appear. The Surveyor makes no representation as to ownership or possession of the Subject Property by any entity or individual who may appear in public records.

This document does not represent a field boundary survey of the described property, or any part or parcel thereof.

This sketch is an accurate graphic depiction of the legal description to which it is attached as per client's request.

SURVEYOR'S CERTIFICATE:

I hereby certify: That this "Sketch and Legal Description," was prepared under my direction and is true and correct to the best of my knowledge and belief. Further, that said Sketch meets the intent of the "Standards of Practice for Land Surveying in the State of Florida", pursuant to Rule 5J–17 of the Florida Administrative Code and its implementing Rule, Chapter 472.027 of the Florida Statutes.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1923 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by T.Y.Lin Int'l/H.J. Ross Assoc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

FIU STOCKPILE MATERIAL MEMORANDUM

DRAFT

January 8, 2020

MEMORANDUM FOR RECORD

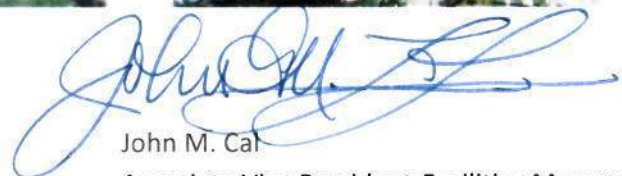

SUBJECT: Stockpile of topsoil and earth at future CasaCuba Site East Side of Florida International University Modesto Maidique Campus.

In July and August of 2019 FIU engaged a landscape contractor through a competitive solicitation to install approximately 2,100 medium to large palm trees on the Florida International University (FIU) Modesto Maidique Campus (MMC). Each of the new palm trees had a "root ball" and removal of soil was necessary to allow space for planting the palm root ball.

It made sense to stockpile the excavated soil on campus for use in upcoming construction projects. We agreed that the contractor would store the valuable topsoil and earth along the edges of a level gravel parking lot on the east side of FIU MMC as it was one of the only suitable sites available. That gravel parking lot is the intended site for the CasaCuba project. We anticipate that the stockpiled earth will be used for other projects at MMC prior to construction of the CasaCuba project.

The source of the mounds of soil now on the CasaCuba site are from uncontaminated soil excavated at MMC for the planting of new palm trees in the summer of 2019. See following aerial photo taken mid-August 2019 showing the CasaCuba Site and the freshly-placed mounds of earth.

John M. Cal
